The P-NP problem is the most important open problem in computer science, if not all of mathematics. Simply stated, it asks whether every problem whose solution can be quickly checked by computer can also be quickly solved by computer. The Golden Ticket provides a nontechnical introduction to P-NP, its rich history, and its algorithmic implications for everything we do with computers and beyond. Lance Fortnow traces the history and development of P-NP, giving examples from a variety of disciplines, including economics, physics, and biology. He explores problems that capture the full difficulty of the P-NP dilemma, from discovering the shortest route through all the rides at Disney World to finding large groups of friends on Facebook. The Golden Ticket explores what we truly can and cannot achieve computationally, describing the benefits and unexpected challenges of this compelling problem.

Physiology Coloring Workbook is a breakthrough approach to learning and remembering the body's processes. Written and illustrated by experts who are both research scientists and teachers , it features 250 striking, original illustrations that will give students a clear and enduring understanding of physiology. Learning interactively, through coloring, thoroughly fixes physiological concepts in the mind and takes less time than memorizing from textbooks. Physiological processes are fully explained, and complex subjects are approached through the gradual introduction of

simple drawings. The authors employ a logical and consistent use of color to convey information; for example, arterial blood is always red, whereas venous blood is blue, and capillary blood is violet. Each lesson includes clearly displayed labels and specific coloring instructions. This book is an invaluable and lasting resource for students in disciplines including anatomy and physiology, biology, nursing, physical therapy and rehabilitation, medical technology, nutrition, physical education, allied health and health sciences. The 250 plates in the book are organized in the following sections: Homeostasis The Cell Transport Mechanisms Nervous System Muscle Cardiovascular System Renal System Respiratory System Gastrointestinal System Metabolism Endocrine System Reproduction

How to Do Ecology Princeton Review  
What is it like to be a swift, flying at over one hundred kilometres an hour? Or a kiwi, plodding flightlessly among the humid undergrowth in the pitch dark of a New Zealand night? And what is going on inside the head of a nightingale as it sings, and how does its brain improvise? Bird Sense addresses questions like these and many more, by describing the senses of birds that enable them to interpret their environment and to interact with each other. Our affinity for birds is often said to be the result of shared senses - vision and hearing - but how exactly do their senses compare with our own? And what about a birds' sense of taste, or smell, or touch or the ability to detect the earth's magnetic field? Or the extraordinary ability of desert birds to detect rain hundreds of kilometres away - how do they do it? Bird Sense is based on a conviction that we have consistently underestimated what goes on in a bird's head. Our understanding of bird behaviour is simultaneously informed and constrained by the way we watch and study them. By drawing attention to the way these frameworks both facilitate and inhibit discovery, it identifies ways we can escape from them to seek new horizons in bird behaviour. There has never been a popular book about the senses of birds. No one has previously looked at how birds interpret the world or the way the behaviour of birds is shaped by their senses. A lifetime spent studying birds has provided Tim Birkhead with a wealth of observation and an understanding of birds and their behaviour that is firmly grounded in science.

Genetic Reflections - A Coloring Book aims to inspire young students and the public to explore the beauty of science and genetics. The organisms in this book are considered 'model' organisms, as they are widely studied in laboratories with hopes to understand human biology, disease pathologies, and ways to improve agricultural crops. Despite the great differences in shape and size, on the genetic level there are lots of similarities. In every species, DNA sequences consist of the same four building blocks (G, C, A, and T). However, slight changes in their use, even in the same gene, can occur in each species. The way our bodies and cells work are well conserved throughout evolution, even in species that may look very different from us. The beauty of our world, even on the cellular level, is apparent. Genetic Reflections - A Coloring Book is a collaboration between Ahna Skop, Elif Kurt and Caitlin Marks; two UW-Madison undergraduate Skop Lab members. This coloring book is the outcome of a year-long independent study in Life Sciences Communication with goals to broadly disseminate the Genetic Reflections scientific glass art installation created by Angela Johnson and Ahna Skop. Part of the proceeds of this book will be donated to charities and programs that support STEAM (Science, Technology, Engineering, Arts, and Mathematics) educational innovations or public outreach events.

BOOST Story of the Vikings Coloring Book The Princeton Review  
Presents the unifying world-concept long sought by scientists, mystics, and sages: an Integral Theory of Everything • Explains how modern science has rediscovered the Akashic Field of perennial philosophy • New edition updates ongoing scientific studies, presents new research inspired by the first edition, and includes new case studies and a section on animal telepathy Mystics and sages have long maintained that there exists an interconnecting cosmic field at the roots of reality that conserves and conveys information, a field known as the Akashic record. Recent discoveries in vacuum physics show that this Akashic Field is real and has its equivalent in science ' s zero-point field that underlies space itself. This field consists of a subtle sea of fluctuating energies from which all things arise: atoms and galaxies, stars and planets, living beings, and even consciousness. This zero-point Akashic Field is the constant and enduring memory of the universe. It holds the record of all that has happened on Earth and in the cosmos and relates it to all that is yet to happen. In Science and the Akashic Field, philosopher and scientist Ervin Laszlo conveys the essential element of this information field in language that is accessible and clear. From the world of science he confirms our deepest intuitions of the oneness of creation in the Integral Theory of Everything. We discover that, as philosopher William James stated, “ We are like islands in the sea, separate on the surface but connected in the deep. ”
