Quarterly Bulletin Multnomah

It is surprising that there is so little research on textbooks, given their centrality to teaching and learning in elementary and secondary schools. Textbooks have become a focus of political and cultural controversy, advocating a multicultural curriculum that has sparked some vigorous protests. Research is absent in this debate; therefore, questions of legitimate knowledge, the role of textbooks, textbook design, policy

selection issues, and economic issues concerning the marketplace are not part of the current debate. Without insights of research on considerate text, mentioning, illustrations and so forth, the current controversy will result in publishers responding to demands for more content not less; thus, textbooks will become compendia of information that on the surface satisfy everyone. This volume demonstrates how research on important issues relative to textbook design can advance our knowledge about what makes textbooks effective learning tools, and thus inform policymakers, publishers, and those involved in textbook selection. Representing pure and applied approaches, researchers present papers on the quality of writing, the role of questions, the role of pictures and illustrations, and the role of auxiliary materials in the design of effective textbooks. The chapters provide insight

into research and its application to textbook design and improvement -- stimulating others to follow this lead.

"The" Quarterly Review Rex Bookstore, Inc. The Science of Life: Biology Course Description This is the suggested course sequence that allows one core area of science to be studied per semester. You can change the sequence of the semesters per the needs or interests of your student; materials for each semester are independent of one another to allow flexibility. Semester 1: Intro to Science Have you ever wondered about human fossils, "cave men," skin color, "ape-men," or why missing links are still missing? Want to discover when T. Rex was small enough to fit in your hand? Or how old dinosaur fossils are-and how we know the age of these bones? Learn how the Bibles' world view (not evolution's) unites evidence from

science and history into a solid creation foundation for understanding the origin, history, and destiny of life-including yours! In *Building Blocks in Science*, Gary Parker explores some of the most interesting areas of science: fossils, the errors of evolution, the evidences for creation, all about early man and human origins, dinosaurs, and even “races.” Learn how scientists use evidence in the present, how historians use evidence of the past, and discover the biblical world view, not evolution, that puts the two together in a credible and scientifically-sound way!

Semester 2: Life Science Study clear biological answers for how science and Scripture fit together to honor the Creator. Have you ever wondered about such captivating topics as genetics, the roll of natural selection, embryonic development, or DNA and the magnificent origins of life? Within *Building Blocks in Life Science* you will discover exceptional insights and clarity to patterns of order in living things, including the promise of healing and new birth in Christ. Study numerous ways to refute the evolutionary worldview that life simply evolved by chance over millions of years. The evolutionary worldview can be found filtered through every topic at every age-level in our society. It has become the overwhelmingly accepted paradigm for the origins of life as taught in all secular institutions. This dynamic education resource helps young people not

only learn science from a biblical perspective, but also helps them know how to defend their faith in the process .

In landmark works such as Toward Unity Among Environmentalists and Sustainability: A Philosophy of Adaptive Ecosystem Management, Norton charted a new and highly productive course for an applied environmental philosophy, one fully engaged with the natural and social sciences as well as the management professions. A Sustainable Philosophy gathers together a distinguished group of scholars and professionals

from a wide array of fields (including environmental philosophy, natural resource management, environmental economics, law, and public policy) to engage Norton's work and its legacy for our shared environmental future. A study in the power of intellectual legacy and the real-world influence of philosophy, the book will be of great interest scholars and students in environmental philosophy, public policy and management, and environmental and sustainability studies. By considering the value and impact of Norton's body of work it will also chart a course for the next generation of pragmatic environmental philosophers and sustainability scholars grappling with questions of environmental value, knowledge, and practice in a rapidly changing world.

In an era of globalization characterized by widespread migration and cultural contacts, psychologists, counselors, and other mental health professionals face a unique challenge: how does one practice successfully when working with clients from so many different backgrounds? Gielen, Draguns, and Fish argue that an understanding of the general principles of multicultural counseling is of great importance to all practitioners. The lack of this knowledge can have several negative consequences during therapy, including differences

in expectations between counselor and client, misdiagnosis of the client's concerns, missed non-verbal cues, and the client feeling that she has been misunderstood. This volume focuses on the general nature of cultural influences in counseling rather than on counseling specific ethnic groups. Counseling practices from all over the world, not just those of Western society, are explored. Bringing together the work of a diverse group of international experts, the editors have compiled a volume that is not only concise and teachable, but also an essential guidebook for all mental-health professionals.
