The past ten years in South Africa has seen many changes in education - the creation of a single department of education; common examinations for all learners in public schools in the country, a new outcomes based education curriculum which was introduced to learners in the general education and training phase since 1998 and will be introduced to the further education and training phase from 2006. To evaluate the success of these changes South African researchers still use the indicator of student achievement. The matriculation examination is the visible, high profile and public performance indicator. Every year parents, learners, teachers, researchers, government officials, policymakers, and the general public get involved in the debate around the matric examination with the most frequently asked questions being - Did the pass rate go up? Are standards dropping? Are the results real or have they been manipulated? How is our education system doing? Are we meeting the development goals? What should the matriculation examination of the future look like? participants from government (national and provincial),

Blended learning has gained significant attention recently by educational leaders, practitioners, and researchers. i² Flex, a variation of blended learning, is based on the premise that certain non-interactive teaching activities, such as lecturing, can take place by students without teachers' direct involvement. Classroom time can then be used for educational activities that fully exploit teacher-student and student-student interactions, allowing for meaningful personalized feedback and scaffolding on demand. Revolutionizing K-12 Blended Learning through the i² Flex Classroom Model presents a well-rounded discussion on the i² Flex model, highlighting methods for K-12 course design, delivery, and evaluation in addition to teacher performance assessment in a blended i² Flex environment. Emphasizing new methods for improving the classroom and learning experience in addition to preparing students for higher education and careers, this publication is an essential reference source for pre-service and in-service teachers, researchers, administrators, and educational technology developers.

The Secret Lives of Saints paints a troubling portrait of an extreme religious sect. These zealous believers impose severe and often violent restrictions on women, deprive children of education and opt instead to school them in the tenets of their faith, defy the law and move freely and secretly over international borders. They punish dissent with violence and even death. No, this sect is not the Taliban, but North America's fundamentalist Mormons. Daphne Bramham explores the history and ideas of this surprisingly resilient and insular society, asking the questions that surround its continued existence and telling the stories of the men and women whose lives are so entwined with it—both the leaders and the victims.

The A-Z subject guide The Princeton Review

Building on the foundation set in Volume I—a landmark synthesis of research in the field—Volume II is a comprehensive, state-of-the-art new volume highlighting new and emerging research perspectives. The contributors, all experts in their research areas, represent the international and gender diversity in the science education research community. The volume is organized around six themes: theory and methods of science education research; science learning; culture, gender, and society and science learning; science teaching; curriculum and assessment in science; science teacher education. Each chapter presents an integrative review of the research on the topic it addresses—pulling together the existing research, working to understand the historical trends and patterns in that body of scholarship, describing how the issue is conceptualized within the literature, how methods and theories have shaped the outcomes of the research, and where the strengths, weaknesses, and gaps are in the literature. Providing guidance to science education faculty and graduate students and leading to new insights and directions for future research, the Handbook of Research on Science Education, Volume II is an essential resource for the entire science education community. Biology for Advanced Level Pearson South Africa

This volume contains a general introduction to the whole series, followed by seven chapters giving most of the quantitative information in compact form. The introduction discusses some current issues and problems in education: the economic value of education to the individual and to society, the effects of automation, the role of the school in social and emotional development, vocational training and physical development, and the relationship between education and social class. The main body of the text describes the quantitative growth of the educational system and is organized into seven topics: characteristics of the population, school enrollment, the proliferation of educational institutions, university enrolment, enrolment in other post-secondary institutions, and the financing of the system. It contains much specialized statistical material including 46 charts and 225 tables, and will be an excellent work of reference.

Report of the Minister of Education Pearson South Africa

While access to higher education has increased globally, student retention has become a major challenge. This book analyses various aspects of the learning pathways of black students from a range of disciplinary backgrounds at a relatively elite, English-medium, historically white South African university. The students are part of a generation of young black people who have grown up in the new South Africa and are gaining access to higher education in unprecedented numbers. Based on two longitudinal case studies, Negotiating Learning and Identity in Higher Education makes a contribution to the debates about how to facilitate access and graduation of working-class students. The longitudinal perspective enabled the students participating in the research to reflect on their transition to university and the stumbling blocks they encountered in their senior years. The contributors show that the school-to-university transition is not linear or universal. Students had to negotiate multiple transitions at various times and both resist and absorb institutional, disciplinary and home discourses. The book describes and analyses the students' ambivalence as they straddle often conflicting discourses within their disciplines; within the institution; between home and the institution, and as they occupy multiple subject positions that are related to the boundaries of place and time. Each chapter

also describes the ways in which the institution supports and/or hinders students' progress, explores the implications of its findings for models of support and addresses the issue of what constitutes meaningful access to institutional and disciplinary discourses.

This book specifies the foundation for Adapted Primary Literature (APL), a novel text genre that enables the learning and teaching of science using research articles that were adapted to the knowledge level of high-school students. More than 50 years ago, J.J. Schwab suggested that Primary Scientific Articles “ afford the most authentic, unretouched specimens of enquiry that we can obtain ” and raised for the first time the idea that such articles can be used for “ enquiry into enquiry ” . This book, the first to be published on this topic, presents the realization of this vision and shows how the reading and writing of scientific articles can be used for inquiry learning and teaching. It provides the origins and theory of APL and examines the concept and its importance. It outlines a detailed description of creating and using APL and provides examples for the use of the enactment of APL in classes, as well as descriptions of possible future prospects for the implementation of APL. Altogether, the book lays the foundations for the use of this authentic text genre for the learning and teaching of science in secondary schools.

Biology is where many of science's most exciting and relevant advances are taking place. Yet, many students leave school without having learned basic biology principles, and few are excited enough to continue in the sciences. Why is biology education failing? How can reform be accomplished? This book presents information and expert views from curriculum developers, teachers, and others, offering suggestions about major issues in biology education: what should we teach in biology and how should it be taught? How can we measure results? How should teachers be educated and certified? What obstacles are blocking reform?
