Amendment 6 to the Fishery Management Plan  
for the Shrimp Fishery of the South Atlantic  
Region Harvard University Press

An indexed bibliography of papers on tuna and  
billfish tagging is appended.

*Endangered Species Act, Section 7*

*Consultation* Harvard University Press

This collection of H.G. Wells's correspondence  
draws on over 50 archives and libraries  
worldwide, including the papers of Wells's  
daughter by Amber Reeves. The book contains  
over 2,000 letters, and while a few are business  
– to publishers, agents and secretaries – the  
majority are much more personal. Wells's  
private correspondence extends from letters to  
President Franklin Roosevelt and Prime  
Ministers Winston Churchill and A.J. Balfour,  
to persons such as 'Mark Benney', who wrote  
novels based on his life in the slums and his

time in prison. There is correspondence too with  
his many female friends and lovers, among  
them Rebecca West, Eileen Power, Gertrude  
Stein, Marie Stopes, Lilah MacCarthy and  
Dorothy Richardson. For example, a letter from  
Moura Budberg, with whom Wells had a long-  
standing affair, which announces that she is  
pregnant by him and about to have an abortion,  
reveals how an advocate of birth control is  
himself caught out. Wells also enjoyed  
correspondence with the press, particularly  
during the two World Wars, and with various  
BBC officials and people who worked on his  
films. Some of his letters on the controversies  
of free love, socialism, birth control, the Fabian  
Society, and the nature of the curriculum of the  
new London University in the 1890s are  
included. Interspersed chronologically with  
Wells's letters is a small selection of about 40

---

letters to Wells, where letters from him are not extant. Among these are letters from Ray Lankester, Joseph Conrad, C.G. Jung, Trotsky, Hedy Gattennigg (the woman who attempted suicide in Wells's flat), and J.C. Smuts. The letters are arranged in these periods: Volume 1 1878–1900; Volume 2 1901–1912; Volume 3 1913–1930; and Volume 4 1930–1946. H.G. Wells's works include *The Time Machine* (1895), *The Invisible Man* (1897), *The War of the Worlds* (1898), *The History of Mr Polly* (1910), and *A Short History of the World* (1922).

*Deadly Cultures* Yale University Press  
The threat of biological weapons has

never attracted as much public attention as in the past five years. Current concerns largely relate to the threat of weapons acquisition and use by rogue states or by terrorists. But the threat has deeper roots—it has been evident for fifty years that biological agents could be used to cause mass casualties and large-scale economic damage. Yet there has been little historical analysis of such weapons over the past half-century. *Deadly Cultures* sets out to fill this gap by analyzing the historical developments since 1945 and addressing three central issues: Why have states continued or begun programs for acquiring biological weapons? Why have states terminated biological weapons programs? How

---

have states demonstrated that they have a portrait of a true hero of our times. truly terminated their biological weapons programs? We now live in a world in which the basic knowledge needed to develop biological weapons is more widely available than ever before. Deadly Cultures provides the lessons from history that we urgently need in order to strengthen the long-standing prohibition of biological weapons. Distribution, Abundance, and Biological Characteristics of Groundfish Off the Coast of Washington, Oregon, and California, 1977-1986 Central European University Press In this biography of Ludwik Rajchman, Marta A. Balinska paints a portrait of a true hero of our times. He was born in Poland in 1881 and was an exponent of humanitarian intervention and defender of colonized people, as adept in secret diplomacy as in organizing vast anti-epidemic campaigns. He inspired the creation of WHO and the foundation of UNICEF, of which he became the first chairman. Progressive but opposed to all dogmas, he was forced by McCarthyism to flee the U.S. and soon became an object of suspicion in the Soviet bloc, finding himself estranged from his beloved Poland. As the story of this remarkable life unfolds, the reader is given a behind-the-scenes

---

glimpse of the major events that shaped the twentieth century. Using family archives and documentary sources from a dozen countries, the author brilliantly reconstructs the career of a man who was not only the first *médecin sans frontières* but also an intellectual with an exceptional sense of the universal. NASA Technical Paper Elsevier Almost daily we hear news stories, advertisements, and scientific reports that promise genetic medicine will make us live longer, enable doctors to identify and treat diseases before they start, and individualize our medical care. But surprisingly, a century ago

eugenicists were making the same promises. The Science of Human Perfection traces the history of the promises of medical genetics and of the medical dimension of eugenics. The book also considers social and ethical issues that cast troublesome shadows over these fields./divDIV DIV Keeping his focus on America, science historian Nathaniel Comfort introduces the community of scientists, physicians, and public health workers who have contributed to the development of medical genetics from the nineteenth century to today. He argues that medical genetics is closely related to eugenics, and

---

indeed the two cannot be fully understood separately. He also carefully examines how the desire to relieve suffering and to improve ourselves genetically, though noble, may be subverted. History makes clear that as patients and consumers we must take ownership of genetic medicine, using it intelligently, knowledgeably, and skeptically, lest pernicious interests trump our own./div

The Biology of Crustacea, Volume 10: Economic Aspects: Fisheries and Culture focuses on economic aspects of elements of crustacean biology associated primarily with

the production of human food, namely, fisheries and culture. Organized into five chapters, this book deals first with the groups comprising the commercially important shrimps and prawns and their near relatives, as well as the generally used fishing method. It then describes the role and impact of body form in the biology and especially the fisheries of crabs. Subsequent chapter centers on lobsters and their kin, particularly the impact on fisheries methods and management approaches of behavioral responses to environment, modes of reproduction, recruitment, and population

---

dynamics. Culture methods and factors important in managing systems through water quality control are then reported. Lastly, large-scale culture of major decapod groups, including the general biological characteristics of decapods relevant to aquaculture, is presented. This book will help stimulate the further exploration of some of the most fascinating and exciting problems in applied crustacean biology.

The Science of Human Perfection

Yale University Press

This report considers the biological and behavioral mechanisms that may underlie the pathogenicity of

tobacco smoke. Many Surgeon General's reports have considered research findings on mechanisms in assessing the biological plausibility of associations observed in epidemiologic studies. Mechanisms of disease are important because they may provide plausibility, which is one of the guideline criteria for assessing evidence on causation. This report specifically reviews the evidence on the potential mechanisms by which smoking causes diseases and considers whether a mechanism is likely to be operative in the production of human disease by tobacco smoke. This evidence is relevant to

---

understanding how smoking causes disease, to identifying those who may be particularly susceptible, and to assessing the potential risks of tobacco products.

Walton County, Florida Food & Agriculture Org.

The first book to examine the iconic depiction of evolution, the "march of progress," and its role in shaping our understanding of how humans evolved We are all familiar with the "march of progress," the representation of evolution that depicts a series of apelike creatures becoming progressively taller and more erect before finally reaching the upright human form. Its

emphasis on linear progress has had a decisive impact on public understanding of evolution, yet the image contradicts modern scientific conceptions of evolution as complex and branching. This book is the first to examine the origins and history of this ubiquitous and hugely consequential illustration. In a story spanning more than a century, from Victorian Britain to America in the Space Age, Gowan Dawson traces the interconnected histories of the two most important versions of the image: the frontispiece to Thomas Henry Huxley's *Evidence as to Man's Place in Nature* (1863) and "The Road to Homo Sapiens," a fold-

---

out illustration in the best-selling book *Early Man* (1965). Dawson explores how the recurring appearances of this image pointed to shifting scientific and public perspectives on human evolution, as well as indicated novel artistic approaches and advancements in technology.

Aelian's *Historical Miscellany* is a pleasurable example of light reading for Romans of the early third century. Offering engaging anecdotes about historical figures, retellings of legendary events, and descriptive pieces - in sum: amusement, information, and variety - Aelian's collection of nuggets and

narratives could be enjoyed by a wide reading public. A rather similar book had been published in Latin in the previous century by Aulus Gellius; Aelian is a late, perhaps the last, representative of what had been a very popular genre. Here then are anecdotes about the famous Greek philosophers, poets, historians, and playwrights; myths instructively retold; moralizing tales about heroes and rulers, athletes and wise men; reports about styles in dress, foods and drink, lovers, gift-giving practices, entertainments, religious beliefs and death customs; and comments on Greek painting. Some of the information is not preserved in any other source. Underlying it all are Aelian's Stoic ideals as well as this Roman's great admiration for the culture of the Greeks (whose language he borrowed for his writings).

## Nature: New Biology

First multi-year cumulation covers six years: 1965-70.

### Imperial Ecology

NSA is a comprehensive collection of international nuclear science and technology literature for the period 1948 through 1976, pre-dating the prestigious INIS database, which began in 1970. NSA existed as a printed product (Volumes 1-33) initially, created by DOE's predecessor, the U.S. Atomic Energy Commission (AEC). NSA includes citations to scientific and technical reports from the AEC, the U.S. Energy Research and Development Administration and its contractors, plus other agencies and international organizations, universities, and industrial and research organizations. References to books, conference

proceedings, papers, patents, dissertations, engineering drawings, and journal articles from worldwide sources are also included. Abstracts and full text are provided if available.
