In the new edition of *BIOLOGY: A HUMAN EMPHASIS*, authors Cecie Starr, Christine A. Evers, and Lisa Starr have partnered with the National Geographic Society to develop a text designed to engage and inspire. This trendsetting text introduces the key concepts of biology to non-biology majors using clear explanations and unparalleled visuals. While mastering core concepts, each chapter challenges students to question what they read and apply the concepts learned, providing students with the critical thinking skills and science knowledge they need in life. Renowned for its writing style the new edition is enhanced with exclusive content from the National Geographic Society, including over 200 new photos and illustrations. New People Matter sections in most chapters profile National Geographic Explorers and Grantees who are making significant contributions in their field, showing students how concepts in the chapter are being applied in their biological research. Each chapter concludes with an Application section highlighting real-world uses of biology and helping students make connections to chapter content. Providing selected chapters from *BIOLOGY: CONCEPTS AND APPLICATIONS*, this text is ideal for courses that emphasize human applications. *Concepts of Biology* is designed for the single-semester introduction to biology course for non-science majors, which for many students is their only college-level science course. As such, this course represents an important opportunity for students to develop the necessary knowledge, tools, and skills to make informed decisions as they continue with their lives. Rather than being mired down with facts and vocabulary, the typical non-science major student needs information presented in a way that is easy to read and understand. Even more importantly, the content should be meaningful. Students do much better when they understand why biology is relevant to their everyday lives. For these reasons, *Concepts of Biology* is grounded on an evolutionary basis and includes exciting features that highlight careers in the biological sciences and everyday applications of the concepts at hand. We also strive to show the interconnectedness of topics within this extremely broad discipline. In order to meet the needs of today's instructors and students, we maintain the overall organization and coverage found in most syllabi for this course. A strength of *Concepts of Biology* is that instructors can customize the book, adapting it to the approach that works best in their classroom. *Concepts of Biology* also includes an innovative art program that incorporates critical thinking and clicker questions to help students understand--and apply--key concepts.

The work of Bernard Maybeck has influenced generations of architects. His landmark buildings include the Palace of Fine Arts and First Church of Christ, Scientist. His emphasis on an open use of natural materials marks him as a pioneer in sustainable architecture, or "green design." Maybeck's work achieves that delicate balance between historicism and modernism, and his buildings are still in use throughout several states on the West Coast and the Midwest. This book includes more than two dozen Maybeck buildings that have never been photographed in color in any other book, as well as several of his buildings that were never documented before. Architect of Elegance not only encompasses his most memorable works but also includes letters and drawings from the family archives never before seen by the general public. The foreword is written by Maybeck's granddaughter, Cherry Maybeck Nittler. Author Mark Wilson's 22-year friendship with Bernard Maybeck's daughter-in-law, Jacomena Maybeck, gave him unique insights into the life and work of one of America's most important architects.

"I have been teaching nonmajors biology at the University of Oklahoma since 1997 and over that time have encountered many students who fear science in general and biology in particular. The complexity, abstractions, and unfamiliar terms can seem overwhelming at first, but with practice, I know that anyone can think like a scientist. Learning to think scientifically is important well beyond passing your biology class. After all, scientific issues confront you every day as you navigate your life and your social media accounts. How do you know if a claim about climate change is scientific? Will you be able to identify misinformation and interpret graphs during the next global health crisis? This book will teach you not only to understand the scientific terms you encounter but also to distinguish "good science" from unscientific claims. I've created the following features to help you make the transition from memorizing facts to understanding concepts—from accepting scientific claims to analyzing them for yourself. These tools will help you to pass your class and to be an informed citizen"--
