## Clam Dissection - Biology Junction

Clam Dissection Topic The external and internal anatomy of a clam is typical of bivalves.

Introduction Mollusks are some of the most common marine invertebrates. All mollusks have several characteristic features, which include a tissue called the mantle. Mollusks are divided into three groups:

cephalopods (octopus and

games, and other study tools. Search. ... Do bivalves show cephalization? explain their answer. No because they don't have a head. ... They are flaplike structures that surround and guide food into the clam's mouth.

**Cow Eye Dissection Worksheet Answers Biology Junction**

The clam should come out of its shell fairly easily if you cut the adductor muscles away from the right shell. Looking down

on the dorsal side will enable you to see the pericardium. The tube-like structure that runs through the pericardium is the intestine.
