University of Hawaii Press

Concepts of Biology is designed for the single-semester introduction to biology course for non-science majors, which for many students is their only college-level science course. As such, this course represents an important opportunity for students to develop the necessary knowledge, tools, and skills to make informed decisions as they continue with their lives. Rather than being mired down with facts and vocabulary, the typical non-science major student needs information presented in a way that is easy to read and understand. Even more importantly, the content should be meaningful. Students do much better when they understand why biology is relevant to their everyday lives. For

these reasons, Concepts of Biology is grounded on an evolutionary basis and includes exciting features that highlight careers in the biological sciences and everyday applications of the concepts at hand. We also strive to show the interconnectedness of topics within this extremely broad discipline. In order to meet the needs of today's instructors and students, we maintain the overall organization and coverage found in most syllabi for this course. A strength of Concepts of Biology is that instructors can customize the book, adapting it to the approach that works best in their classroom. Concepts of Biology also includes an innovative art program that incorporates critical thinking and clicker questions to help students understand--and apply--key concepts.

### **Beyond Tradition and Modernity?**

Oswaal Books and Learning Private Limited

This edition of our successful series to support the Cambridge IGCSE Biology syllabus (0610) is fully updated for the revised syllabus for first examination from 2016. Written by an experienced teacher who is passionate about practical skills, the Cambridge IGCSE® Biology Practical Workbook makes it easier to incorporate practical work into lessons. This Workbook provides interesting and varied practical investigations for students to carry out safely, with guided exercises designed to develop the essential skills of handling data, planning investigations, analysis and evaluation. Exam-style questions for each topic offer novel scenarios for students to apply their knowledge and understanding, and to help them to prepare for their IGCSE Biology paper 5 or paper 6 examinations.

Oswaal CBSE Sample Question Paper Class 12 Biology Book (For Term I Nov-Dec 2021 Exam)

This book explores the interplay between regulation and emerging technologies in the context of synthetic biology, a developing field that promises great benefits, and has already yielded fuels and medicines made with designer micro-organisms. For all its promise, however, it also

poses various risks. Investigating the distinctiveness of synthetic biology and the regulatory issues that arise, Alison McLennan questions whether synthetic biology can be regulated within existing structures or whether new mechanisms are needed.

**Oswaal Karnataka PUE Sample Question Papers, II PUC Class 12, Biology, Book (For 2022 Exam)** Princeton Review

One of the leading textbooks in its field, *Bringing Fossils to Life* applies paleobiological principles to the fossil record while detailing the evolutionary history of major plant and animal phyla. It incorporates current research from biology, ecology, and population genetics, bridging the gap between purely theoretical paleobiological textbooks and those that describe only invertebrate paleobiology and that emphasize cataloguing live organisms instead of dead objects. For this third edition Donald R. Prothero has revised the art and research throughout, expanding the coverage of invertebrates and adding a discussion of new methodologies and a chapter on the origin and early evolution of life.

*For MCAT 2015* Harpercollins College Division

Elegant, suggestive, and clarifying, Lewis Thomas's profoundly humane vision explores the world around us and examines the complex interdependence of all things. Extending beyond the usual limitations of biological science and into a vast and wondrous world of hidden relationships, this provocative book explores in personal, poetic essays to topics such as computers, germs, language, music, death, insects, and medicine. Lewis Thomas writes, "Once you have become permanently startled, as I am, by the realization that we are a social species, you tend to keep an eye out for the pieces of evidence that this is, by and large, good for us."

*Bookseller*

This highly respected and valued textbook has been the book of choice for Cambridge IGCSE students since its publication. This second edition, complete with CD-ROM, continues to provide comprehensive, up-to-date coverage of the core and extended curriculum topics specified in the Cambridge IGCSE Biology syllabus. The book is supported by a CD-ROM containing extensive revision and exam practice questions, background information and reference material.

[Biology for IGCSE](#)

This clear and stimulating text has been revised to match the latest IGCSE syllabus exactly and provides all aspects of the IGCSE course in a single text. Straightforward language makes it accessible to students of all abilities. Each chapter contains a *Agricultural Libraries Information Notes* This collection explores birthing in the Pacific against the background of debates about tradition and modernity. A wide-ranging introduction and conclusion, together with case studies from Papua New Guinea, New Caledonia, Vanuatu, Fiji, and Tonga, show how simple contrasts between traditional and modern practices, technocratic and organic models of childbirth, indigenous and foreign approaches, and notions of "before" and "after" can be potent but problematic. The difficulties entailed confront public health programs concerned with practical issues of infant and maternal survival in developing countries as well as scholarly analyses of birthing in cross-cultural contexts. The introduction analyzes central concepts and themes: questions of survival, safety, and well-being; the significance of postures, practices, and sites; the role of midwives, traditional birth attendants, and nurses; and the role of men in birthing and reproduction. Contributors--four anthropologists, a historian, and a community health worker--offer insights into the ways mothers, midwives, and nurses relate the traditional and the modern, and how ideas of tradition and modernity have shaped representations of Pacific childbirth. The conclusion provides researchers with a guide to relevant literature from several disciplines. As a whole the collection warns against either a celebration of emancipation through biomedicine or a recuperative romance about women's past powers in reproduction. Contributors: Ruta Fiti-Sinclair, Margaret Jolly, Vicki Lukere, Shelley Mallett, Helen Morton, Christine Salomon.
