*Biology: Exploring the Diversity of Life* is uniquely designed for today's Canadian biology student. The intention of this introductory biology text is to capture students' imaginations and evoke a sense of curiosity about the vast world of biology. To facilitate immediately immersing students in biology, the text puts the review of chemistry and biochemistry in a distinct section called the Purple Pages, to be easily referenced when needed. The authors have taken great care to encourage critical thinking and learning with engaging visuals and by integrating the material across the book's chapters. With a focus on the Canadian biology student, the text approaches the material with a readable style that instills a sense of wonder by using examples from across the spectrum of biodiversity, showcasing Canadian research and innovation, and highlighting an array of career options that stem from biology. The text engages students in the science and future of biological science with effective pedagogy, streamlined content, a comprehensive MindTap, and a focus on research and experimentation that creates a complete biology learning solution.

*Concepts of Genetics* is a one semester introductory genetics text that explains genetics concepts in a concise, engaging and up-to-date manner. Rob Brooker, author of market leading texts in *Genetics* and *Intro Biology* for majors, brings his clear and accessible writing style to this briefer genetics text. He employs the use of experimentation and stresses the fundamentals of the Scientific Method in presenting genetics concepts, then further engages the reader through the use of formative assessment to assist the student in understanding the core genetic principles. The introduction of Learning Outcomes throughout the chapter in the 2nd edition helps the student focus on the key concepts presented in the chapter. *Concepts of Genetics, 2e* also stresses developing problem-solving skills with the new feature "Genetic TIPS" that breaks a problem down into conceptual parts (Topic, Information, Problem-Solving Strategy) to help students work through the answer. The 2nd edition will be more focused on core concepts with the narrowing of book content by eliminating specialty chapters that many courses do not have time to cover in detail (the full chapters on Developmental Genetics and Evolutionary Genetics--these general topics are discussed elsewhere, but not in the amount of detail in the first edition). The author has added new information regarding epigenetics and material on personalized medicine. The integration of the genetics text and the power of digital world are now complete with McGraw-Hill's ConnectPlus including LearnSmart. Users who purchase Connect Plus receive access to SmartBook and to the full online ebook version of the textbook.

*The Process of Social Research* successfully meets two major challenges of teaching social science methods: to make the material interesting and accessible to students, and to provide them with the tools necessary to understand, evaluate, and conduct research. Authors Jeffrey C. Dixon, Royce A. Singleton, Jr., and Bruce C. Straits employ a conversational writing style that is engaging and student-friendly. Using everyday examples to introduce chapters and clarify complex concepts, they provide current research examples on such cutting-edge topics as immigration, family composition, prosecutorial misconduct, organized racism, homelessness, social inequality and education, and alcohol consumption and grades. Placing a unique emphasis on the research process, the book helps students understand the logic and mechanics of social research, giving them the tools and the power to evaluate the research of others and to conduct their own research. Beginning with the introduction, every chapter contains flowcharts of research processes. As each diagram is presented, the authors relate the specific method to the overall research process. Then, over the course of the chapter or section, they flesh out each step. This way, they convey information about the "nuts and bolts" of research while ensuring that students do not lose sight of the logic of inquiry. Comprehensive and up-to-date without attempting to be encyclopedic in its coverage, *The Process of Social Research* provides a balance between qualitative and quantitative research, taking a more integrated approach to describing the relationship between theory and research.

The first and second editions of *BIOLOGY*, written by Dr. Rob Brooker, Dr. Eric Widmaier, Dr. Linda Graham, and Dr. Peter Stiling, has reached thousands of students and provided them with an outstanding view of the biological world. Now, the third edition has gotten even better! The author team is dedicated to producing the most engaging and current text that is available for undergraduate students who are majoring in biology. The authors want students to be inspired by the field of biology and become critical thinkers. They understand the goal of a professor is to prepare students for future course work, lab experiences, and careers in the sciences. Building on the successes of the first and second editions, the third edition reflects a focus on core competencies and provides a more learner-centered approach. The strength of an engaging and current text is improved with the addition of new pedagogical features that direct the students' learning goals and provide opportunities for assessment, to determine if students understand the concepts.

Recent advances in the biosciences have led to a range of powerful new technologies, particularly nucleic acid, protein and cell-based methodologies. The most recent insights have come to affect how scientists investigate and define cellular processes at the molecular level. This book expands upon the techniques included in the first edition, providing theory, outlines of practical procedures, and applications for a range of techniques. Written by a well-established panel of

research scientists, the book provides an up-to-date collection of methods used regularly in the authors' own research programs.

*Home, School, and Community Collaboration* uses the culturally responsive family support model as a framework to prepare teachers to work effectively with children from diverse families. Authors Kathy B. Grant and Julie A. Ray skillfully incorporate numerous real-life vignettes and case studies to show readers the practical application of culturally responsive family engagement. The Fourth Edition contains additional content that enhances the already relevant text, including: a new section titled "Perspectives on Poverty" acknowledging the deep levels of poverty in the United States and the impact on family-school relations; increased coverage of Latino/Latina family connections; and updated demographics focusing on the issues impacting same-sex families, families experiencing divorce, children and family members with chronic illnesses, military families, and grandparents raising children. With contributions from more than 22 experts in the field offering a wide range of perspectives, this book will help readers understand, appreciate, and support diverse families. How to use design as a tool to create not only things but ideas, to speculate about possible futures. Today designers often focus on making technology easy to use, sexy, and consumable. In *Speculative Everything*, Anthony Dunne and Fiona Raby propose a kind of design that is used as a tool to create not only things but ideas. For them, design is a means of speculating about how things could be—to imagine possible futures. This is not the usual sort of predicting or forecasting, spotting trends and extrapolating; these kinds of predictions have been proven wrong, again and again. Instead, Dunne and Raby pose "what if" questions that are intended to open debate and discussion about the kind of future people want (and do not want). *Speculative Everything* offers a tour through an emerging cultural landscape of design ideas, ideals, and approaches. Dunne and Raby cite examples from their own design and teaching and from other projects from fine art, design, architecture, cinema, and photography. They also draw on futurology, political theory, the philosophy of technology, and literary fiction. They show us, for example, ideas for a solar kitchen restaurant; a flypaper robotic clock; a menstruation machine; a cloud-seeding truck; a phantom-limb sensation recorder; and devices for food foraging that use the tools of synthetic biology. Dunne and Raby contend that if we speculate more—about everything—reality will become more malleable. The ideas freed by speculative design increase the odds of achieving desirable futures.
