This concise,

clinically focused handbook offers a complete overview of tuberculosis and reviews the latest guidelines, treatment options, clinical trials and management of this disease. Handbook of Tuberculosis is a well-rounded book written by renowned researchers at the Johns Hopkins Center for Tuberculosis Research. The easily accessible text offers infectious disease specialists, pulmonologists, and other healthcare workers an excellent quick reference tool,

with full color tables and figures enhancing the text further. Tuberculosis is a life-threatening lung infection that affects people of all ages. It is the second biggest cause of death from infectious diseases and is the most common cause of death amongst patients with HIV/AIDS. Education on the recognition of tuberculosis and the subsequent treatment of the disease is empirical to the prevention of widespread resistance. There is a lack of knowledge on how to treat coinfecting and comorbid

patients, this handbook offers the latest medical guidance and treatment options to equip physicians to manage such patients.

A memoir of Karachi through the eyes of its women An Indies

Introduce Debut Authors

Selection For a brief moment on

December 27, 2007, life came to a standstill in Pakistan. Benazir Bhutto, the country's former prime minister and the first woman ever to lead a Muslim country, had been assassinated at a political rally just outside Islamabad. Back in Karachi—Bhutto's birthplace and Pakistan's other great metropolis—Ra Zakaria uses that moment to begin her intimate exploration of the country of her birth. Her Muslim-Indian family immigrated to Pakistan from Bombay in 1962, escaping the precarious state in which the Muslim population in India found itself following the Partition. For them, Pakistan

represented enormous promise. And for some time, Zakaria's family prospered and the city prospered. But in the 1980s, Pakistan's military dictators began an Islamization campaign designed to legitimate their rule—a campaign that particularly affected women's freedom and safety. The political became personal when her aunt Amina's husband, Sohail, did the unthinkable and took a second wife, a humiliating and painful betrayal of kin and custom that shook the foundation of Zakaria's family but was permitted under the country's new laws. The young Rafia grows up in the shadow of Amina's shame and fury, while the world outside her home turns ever more chaotic and violent as the opportunities available to post-Partition immigrants are dramatically curtailed and terrorism sows its seeds in Karachi. Telling the parallel stories of

Amina's polygamous marriage and Pakistan's hopes and betrayals, The Upstairs Wife is an intimate exploration of the disjunction between exalted dreams and complicated realities. Current Topics In Physics: In Honor Of Sir Roger J Elliott Springer Nature Mad Libs is the world's greatest word game and the perfect gift for anyone who likes to laugh! Write in the missing words on

each page to create your own hilariously funny stories all about cats. Our Meow Libs will keep you and your ADJECTIVE cat purring with laughter! With 21 "fill-in-the-blank" stories about our feline friends and all their habits, claws, hisses and purrs, there's enough laughs inside to fill a kitty litter box! Play alone, in a group or at your local pet store! Mad Libs are a fun family activity recommended for ages 8 to NUMBER. Meow Libs includes: - Silly stories: 21 "fill-in-the-blank" stories all about purrfect felines! - Language arts

practice: Mad Libs are a great way to build reading comprehension and grammar skills. - Fun With Friends: each story is a chance for friends to work together to create unique stories! The East Wind and Other Short Stories CRC Press A new focus on glycoscience, a field that explores the structures and functions of sugars, promises great advances in areas as diverse as medicine, energy

generation, and materials science, this report finds. Glycans--also known as carbohydrates, saccharides, or simply as sugars--play central roles in many biological processes and have properties useful in an array of applications. However, glycans have received little attention from the research community due to a lack of tools to probe their often complex structures and

properties. Transforming Glycoscience: A Roadmap for the Future presents a roadmap for transforming glycoscience from a field dominated by specialists to a widely studied and integrated discipline, which could lead to a more complete understanding of glycans and help solve key challenges in diverse fields. Princeton University Press Based on a fresh look at

the contemporary Mamluk sources, this study challenges the conventional periodization of Mamluk history by dating the onset of the decline of the Mamluk state to the third reign of al-Nasir Muhammad. It furthermore reveals the Mamluk system as dynamic in nature, susceptible to change throughout its history. Activity report Stanford

University Press Drawing upon international relations theory, this volume conceptualizes possible solutions to the various conflicts in South Asia. It analyses the bilateral conflicts between India and Pakistan and other multilateral problems specific to this region. Bringing together scholarship from several South Asian

countries, it offers a well-rounded formulation of conflict resolution and cooperation-building. The volume employs a strong theoretical rubric, empirical research, and exhaustive fieldwork. Its centralizing approach to sustain the diversity of perspectives and arguments makes it an indispensable contribution to strategic studies.

The Upstairs Wife
Penguin UK
Salt comes from the north, gold from the south, but the word of God and the treasures of wisdom are only to be found in Timbuktu." 15th-century Malian proverb. In a joint project between South Africa and Mali, a library to preserve more than 200 000 Arabic and West African manuscripts dating from the 13th to the 19th centuries is currently under construction. It is the first official cultural project of the New Partnership for Africa's Development (Nepad), the

socio-economic development plan of the African Union, and when the library is built, the cultural role of Timbuktu will be revived, as it becomes the safehaven for the treasured manuscripts. The manuscripts prove that Africa had a rich legacy of written history, long before western colonisers set foot on the continent. This volume, authored by leading international scholars, begins to sketch the 'meaning' of Timbuktu within the context of the intellectual history of West Africa, in particular, and of

the African continent, in general. The book covers four broad areas: Part I provides an introduction to the region; outlines what archaeology can tell us of its history, examines the paper and various calligraphic styles used in the manuscripts; and explains how ancient institutions of scholarship functioned. Part II begins to analyse what the manuscripts can tell us of African history. Part III offers insight into the lives and works of just a few of the many scholars who achieved renown in the region and

beyond. Part IV provides a glimpse into Timbuktu's libraries and private collections. Part V looks at the written legacy of the eastern half of Africa, which like that of the western region, is often ignored. A fascinating read for anyone who wishes to gain an understanding of the aura of mystique and legend that surrounds Timbuktu. The Meanings of Timbuktu strives to contextualise and clarify the importance of efforts to preserve Timbuktu's manuscripts for Mali, for Africa

and for the intellectual world."--Abstract

Oxford University Press
Comprehensive Overview of Advances in Olfaction The common belief is that human smell perception is much reduced compared with other mammals, so that whatever abilities are uncovered and investigated in animal research would have little significance for

humans. However, new evidence from a variety of sources indicates this traditional view is likely overly simplistic. The Neurobiology of Olfaction provides a thorough analysis of the state-of-the-science in olfactory knowledge and research, reflecting the growing interest in the field. Authors from some of the most respected laboratories in the world

explore various aspects of olfaction, including genetics, behavior, olfactory systems, odorant receptors, odor coding, and cortical activity. Until recently, almost all animal research in olfaction was carried out on orthonasal olfaction (inhalation). It is only in recent years, especially in human flavor research, that evidence has begun to be

obtained regarding the importance of retronasal olfaction (exhalation). These studies are beginning to demonstrate that retronasal smell plays a large role to play in human behavior. Highlighting common principles among various species – including humans, insects, *Xenopus laevis* (African frog), and *Caenorhabditis elegans* (nematodes) –

this highly interdisciplinary book contains chapters about the most recent discoveries in odor coding from the olfactory epithelium to cortical centers. It also covers neurogenesis in the olfactory epithelium and olfactory bulb. Each subject-specific chapter is written by a top researcher in the field and provides an extensive list of reviews and original articles for students and scientists

interested in further readings. Immunology and Evolution of Infectious Disease Human Sciences Research Council All being done, we went to Mrs Shipmans, who is a great butter-woman; and I did see there the most of milke and cream, and the cleanest, that I ever saw in my life (29 May 1661). In recent years, there have been considerable developments in techniques for the investigation and utilisation of enzymes. With the assistance of a co-author, this popular student textbook has been updated to include techniques such as

membrane chromatography, aqueous phase partitioning, engineering recombinant proteins for purification and due to the rapid advances in bioinformatics/proteomics, a discussion of the analysis of complex protein mixtures by 2D electrophoresis and RPHPLC prior to sequencing by mass spectroscopy. Written with the student firmly in mind, no previous knowledge of

biochemistry, and little of chemistry, is assumed. It is intended to provide an introduction to enzymology, and a balanced account of all the various theoretical and applied aspects of the subject which are likely to be included in a course. Provides an introduction to enzymology and a balanced account of the theoretical and applied aspects of the subject. Discusses techniques such as

membrane chromatography, aqueous phase partitioning and engineering recombinant proteins for purification. Includes a discussion of the analysis of complex protein mixtures by 2D-electrophoresis and RPHPLC prior to sequencing by mass spectroscopy. A History of India Cambridge University Press. WHO has published a global TB report every year since 1997. The main aim of the report is to

provide a comprehensive and up-to-date assessment of the TB epidemic, and of progress in prevention, diagnosis and treatment of the disease, at global, regional and country levels. This is done in the context of recommended global TB strategies and targets endorsed by WHO's Member States, broader development goals set by the United Nations (UN) and targets set in the political declaration at the first UN high-level meeting on TB (held in September 2018). The 2019 edition of the global TB

report was released on 17 October 2019. The data in this report are updated annually. Please note that direct comparisons between estimates of TB disease burden in the latest report and previous reports are not appropriate. The most recent time-series of estimates are published in the 2019 global TB report. Milk Proteins National Academies Press. Many advances have been made in the last decade in the understanding of the

computational principles underlying olfactory system functioning. Neuromorphic Olfaction is a collaboration among European researchers who, through NEUROCHEM (Fp7-Grant Agreement Number 216916)—a challenging and innovative European-funded project—introduce a novel computing paradigms and biomimetic artifacts for chemical sensing. The implications of these findings

are relevant to a wide audience, including researchers in artificial olfaction, neuroscientists, physiologists, and scientists working with chemical sensors. Developing neuromorphic olfaction from conceptual points of view to practical applications, this cross-disciplinary book examines: The biological components of vertebrate and invertebrate chemical sensing systems The early coding pathways in the

biological olfactory system, showing how nonspecific receptor populations may have significant advantages in encoding odor intensity as well as odor identity. The redundancy and the massive convergence of the olfactory receptor neurons to the olfactory bulb A neuromorphic approach to artificial olfaction in robots Reactive and cognitive search strategies for olfactory robots The implementation of a

computational model of the mammalian olfactory system. The book's primary focus is on translating aspects of olfaction into computationally practical algorithms. These algorithms can help us understand the underlying behavior of the chemical senses in biological systems. They can also be translated into practical applications, such as robotic navigation and systems for uniquely detecting

chemical species in a complex background. InterCellular Signalling in the Mammary Gland Penguin This indispensable book is a compilation of invited talks delivered at the symposium, "Current Topics in Physics" held in Mexico City in June 2003, to celebrate the 75th birthday of Professor Sir Roger Elliott. The contributions have been prepared by research associates, former students, post-doctoral

fellows and colleagues of Professor Elliott, many of them leading scientists — as Sir Roger himself — in important research institutes around the world. The book gives a very timely and comprehensive overview of various key areas of modern condensed matter and statistical physics. 19 original contributions are included, grouped in three main areas: disorder and dynamical systems,

structures and glasses, electrical and magnetic properties. The contributions are by many of the foremost researchers in the field of condensed matter and statistical physics. In particular, contributions by such prominent scientists as M E Fisher, A A Maradudin, M F Thorpe, M Balkanski, T Fujiwara, and of course Sir Roger Elliott himself make this book a rewarding read. Environmental Issues in India Oxford

University Press, USA
This authoritative volume provides a holistic picture of antibody-drug conjugates (ADCs). Fourteen comprehensive chapters are divided into six sections including an introduction to ADCs, the ADC construct, development issues, landscape, IP and pharmacoecconomics, case studies, and the future of the field. The book examines everything from the selection of the antibody,

the drug, and the linker to a discussion of developmental issues such as formulations, bioanalysis, pharmacokinetic-pharmacodynamic relationships, and toxicological and regulatory challenges. It also explores pharmacoeconomics and intellectual properties, including recently issued patents and the cost analysis of drug therapy. Case studies are presented for the three ADCs that have received FDA approval: gemtuzumab ozogamicin

(Mylotarg®), Brentuximab vedotin (Adcetris®), and ado-trastuzumab emtansine (Kadcyla®), as well as an ADC in late-stage clinical trials, glebatumumab vedotin (CDX-011). Finally, the volume presents a perspective by the editors on the future directions of ADC development and clinical applications. Antibody-Drug Conjugates is a practical and systematic resource for scientists,

professors, and students interested in expanding their knowledge of cutting-edge research in this exciting field.
