#1 New York Times Bestseller from the author of *How to Change Your Mind*, *The Omnivore's Dilemma*, and *Food Rules*. There's plenty of it around, and we all love to

eat it. So why should anyone need to defend it? Because in the so-called Western diet, food has been replaced by nutrients, and common sense by confusion--most of what we 're consuming today is longer the product of nature but of food science. The result is what Michael Pollan calls the American Paradox: The more we worry about nutrition, the less healthy we see to become. With *In Defense of Food*, Pollan proposes a new (and very old) answer to the question of what we should eat that comes down to seven simple but liberating words:

"Eat food. Not too much. Mostly plants." Pollan 's bracing and eloquent manifesto shows us how we can start making thoughtful food choices that will enrich our lives, enlarge our sense of what it means to be healthy, and bring pleasure back to eating.

Delta Estuary remains biologically diverse and functions as a central element in California's water supply system. Uncertainties about the future, actions taken under the federal Endangered Species Act (ESA) and companion California statues, and lawsuits have led to conflict concerning the timing and amount of scientific water that can be diverted from the Delta for agriculture, municipal, and industrial purposes and concerning how much water is needed to protect the Delta ecosystem and its component species. Sustainable Water and Environmental Management in the California Bay-Delta focuses on questions, assumptions, and conclusions underlying water-management alternatives and reviews the initial public draft of the Bay Delta Conservation Plan in terms of adequacy of its use of science and adaptive management. In addition, this report identifies

---

the factors that may be contributing to the decline of federally listed species, recommend future water-supply and delivery options that reflect proper consideration of climate change and compatibility with objectives of maintaining a sustainable Bay-Delta ecosystem, advises what degree of restoration of

the Delta system is likely to be attainable, and provides metrics that can be used by resource managers to measure progress toward restoration goals.

ONE OF BARACK OBAMA ' S  
FAVORITE BOOKS OF THE  
YEAR " The best science-fiction  
nonfiction novel I ' ve ever  
read. " —Jonathan Lethem "If I  
could get policymakers, and  
citizens, everywhere to read just  
one book this year, it would be  
Kim Stanley Robinson ' s The  
Ministry for the Future." —Ezra  
Klein (Vox) The Ministry for the  
Future is a masterpiece of the

imagination, using fictional  
eyewitness accounts to tell the story  
of how climate change will affect us

postapocalyptic world, but a future  
that is almost upon us. Chosen by  
Barack Obama as one of his favorite  
books of the year, this extraordinary  
novel from visionary science fiction  
writer Kim Stanley Robinson will  
change the way you think about the  
climate crisis. "One hopes that this

large, grows by an order of  
magnitude. Because the point of his  
books is to fire the  
imagination." New York Review  
of Books "If there ' s any book that

The ocean has absorbed a significant portion of all human-made carbon dioxide emissions. This benefits human society by moderating the rate of climate change, but also causes unprecedented changes to ocean chemistry. Carbon dioxide taken up by the ocean decreases the pH of the water and leads to a suite of chemical changes collectively known as ocean acidification. The long term consequences of ocean acidification are not known,

but are expected to result in changes to many ecosystems and the services they provide to society. Ocean Acidification: A National Strategy to Meet the Challenges of a Changing Ocean reviews the current state of knowledge, explores gaps in understanding, and identifies several key findings. Like climate change, ocean acidification is a growing global problem that will intensify with continued CO<sub>2</sub> emissions and has the potential to change marine ecosystems and affect benefits

to society. The federal government has taken positive initial steps by developing a national ocean acidification program, but more information is needed to fully understand and address the threat that ocean acidification may pose to marine ecosystems and the services they provide. In addition, a global observation network of chemical and biological sensors is needed to monitor changes in ocean conditions attributable to acidification.
