lation of birds called medium ground finches on
Daphne Major, one of the Galápagos Islands. Then
you and your classmates will simulate the fitness
of birds of a fictional species called Saccharae

utensilus. This bird species has three possible variations in beak phenotype. Each “bird’s” ability to acquire food will determine whether it dies, or

Birds On An Island Lab

The island chain is extremely remote. It lies hundreds of miles from the nearest landmass, South America. The plants and animals that colonized the islands evolved in unique ways. The islands, and especially a group of dull little birds known as Darwin’s ?nches, helped inspire Charles Darwin’s ideas about evolution.

Beaks of Finches Lab Quiz Answers - Google Docs

Tell the students that they are going to become members of a bird population in an imaginary place called Clippy Island to undertake an investigation into natural selection. Ask the students to define natural selection. Clippy Island is populated by one species called Springbeaks. Springbeaks are simple creatures; they can’t fly and live on the

Plum Island Animal Disease Center - Wikipedia

Birds on an Island Sindi Mukaj, Olisia Kusha Analysis and Conclusions: I. Yes, there was a beak phenotype that was more successful than the others in rounds 1-3, and it was the plastic spoon. II. III. Spoon Beak: After each round, the spoon beak population increased, and continued to increase even after the drought,

showing no signs of decreasing.

Scanned Document

However, as Plum Island was named an important bird area by the New York Audubon Society, it has attracted different birds. Plum Island has placed osprey nests and bluebird boxes throughout the island. As of 2008, new kestrel houses were planned to be added.

GALÁPAGOS FINCHES: Famous Beaks Activity

The group of birds known as Darwin’s finches consists of fourteen species (Fig. 1), of which thirteen are found among the islands of the Galapagos archipelago. The remaining species is found on Cocos Island, which lies 600 kilometers northeast of the Galapagos (Fig. 2).

In birds, the ability to crush and eat seeds is related to the size, shape, and thickness of the beak. Birds with larger, thicker beaks are better adapted to crush and open seeds that are larger. One species of bird found in

the Galapagos Islands is the medium ground finch. It is easier for most of the medium ground finches

Biology lab report – Birds on an Island – Pages 157-163

Setup: You will need 6 simulated bird beaks.

You can use tongs, tweezers, chopsticks, a spoon, a skewer, a straw, a clothespin, or any other implements that resemble bird beaks. Try to make them as varied as possible. You will also use 6 simulated bird foods. For example, you can float styrofoam peanuts in a bowl of water to simulate water bugs.
