Software Architecture with Spring 5.0 John Wiley & Sons New York Times Bestseller Named "22 Essential Cookbooks for Every Kitchen" by SeriousEats.com Named "25 Favorite Cookbooks of All Time" by Christopher Kimball Named "Best Cookbooks Of 2016" by Chicago Tribune, BBC, Wired, Epicurious, Leite's Culinaría Named "100 Best Cookbooks of All Time" by Southern Living Magazine For succulent results every time, nothing is more crucial than understanding the science behind the interaction of food, fire, heat, and smoke. This is the definitive guide to the concepts, methods, equipment, and accessories of barbecue and grilling. The founder and editor of the world's most

popular BBQ and grilling website, AmazingRibs.com, "Meathead" Goldwyn applies the latest research to backyard cooking and 118 thoroughly tested recipes. He explains why dry brining is better than wet brining; how marinades really work; why rubs shouldn't have salt in them; how heat and temperature differ; the importance of digital thermometers; why searing doesn't seal in juices; how salt penetrates but spices don't; when charcoal beats gas and when gas beats charcoal; how to calibrate and tune a grill or smoker; how to keep fish from sticking; cooking with logs; the strengths and weaknesses of the new pellet cookers; tricks for rotisserie cooking; why cooking whole animals is a bad idea, which grill grates are best; and why beer-can chicken is a waste of good beer and nowhere close to the best way to cook a bird. He shatters the myths that stand in the way of perfection. Busted misconceptions include:

- Myth: Bring meat to room

temperature before cooking. Busted! Cold meat attracts smoke better. • Myth: Soak wood before using it. Busted! Soaking produces smoke that doesn't taste as good as dry fast-burning wood. • Myth: Bone-in steaks taste better. Busted! The calcium walls of bone have no taste and they just slow cooking. • Myth: You should sear first, then cook. Busted! Actually, that overcooks the meat. Cooking at a low temperature first and searing at the end produces evenly cooked meat. Lavishly designed with hundreds of illustrations and full-color photos by the author, this book contains all the sure-fire recipes for traditional American favorites and many more outside-the-box creations. You'll get recipes for all the great regional barbecue sauces; rubs for meats and vegetables; Last Meal Ribs, Simon & Garfunkel Chicken; Schmancy Smoked Salmon; The Ultimate Turkey; Texas Brisket; Perfect Pulled Pork; Sweet & Sour Pork with Mumbo Sauce; Whole Hog; Steakhouse Steaks; Diner

Burgers; Prime Rib; Brazilian Short Ribs; Rack Of Lamb Lollipops; Huli-Huli Chicken; Smoked Trout Florida Mullet – Style; Baja Fish Tacos; Lobster, and many more. *Functional Programming in Kotlin* Scholastic Incorporated A thorough technical assessment of the Rover V8 engine and all methods of tuning for increased power output. **An Intellectual History of Psychology**, already a classic in its field, is now available in a concise new third edition. It presents psychological ideas as part of a greater web of thinking throughout history about the essentials of human nature, interwoven with ideas from philosophy, science, religion, art, literature, and politics. Daniel N. Robinson demonstrates that from the dawn of rigorous and self-critical inquiry in ancient Greece, reflections about human nature have been inextricably linked to the cultures from which they arose, and each definable historical age has added its own character and tone to this long tradition. **An Intellectual History of Psychology** not only explores the most significant ideas about human nature from ancient to modern times, but also examines the broader social and scientific contexts in which these concepts were articulated and defended. Robinson treats each epoch, whether ancient Greece or Renaissance Florence or Enlightenment France, in its own terms, revealing the problems that dominated the age and engaged the energies of leading thinkers. Robinson also explores the abiding tension between humanistic and scientific perspectives, assessing the most convincing positions on each side of the debate. Invaluable as a text for students

and as a stimulating and insightful overview for scholars and practicing psychologists, this volume can be read either as a history of psychology in both its philosophical and aspiring scientific periods or as a concise history of Western philosophy ' s concepts of human nature.

This open access book approaches the anxieties inherent in food consumption and production in Vietnam. The country's rapid and recent economic integration into global agro-food systems and consumer markets spurred a new quality of food safety concerns, health issues and distrust in food distribution networks that have become increasingly obscured. This edited volume further puts the eating body centre stage by following how gendered body norms, food taboos, power structures and social differentiation shape people's ambivalent relations with food. It uncovers Vietnam's trajectories of agricultural modernisation against which consumers and producers manoeuvre amongst food self-sufficiency, security and abundance. **Food Anxiety in Globalising Vietnam** is explicitly about 'dangerous' food - regarding its materiality and meaning. It provides social science perspectives on anxieties related to food and surrounding

discourses that travel between the local and the global, the individual and society and into the body. Therefore, the book's lens of food anxiety matters for social theory and for understanding the embeddedness and discontinuities of food globalizations in Vietnam and beyond. Due to its rich empirical base, methodological approaches and thematic foci, it will appeal to scholars, practitioners and students alike.
