**Popular Science** Black & Decker Corp"Executives at Black & Decker Corp. challenge managers to design and develop a cordless electric power drill for professionals that will enhance its reputation among that group of users and significantly lift the company's share of that market. Moreover, the new product must have a platform that, with modest changes, will suit both the North American and European markets. Like many such projects, the time line is short. The management challenge is to put together an international team and develop strategies for defining competitive opportunities, refining program objectives, ensuring effective communication, and keeping people focused.

Designers--including engineers and product designers--must overcome a series of technical challenges related to the power the drill will deliver, battery location, and ergonomics. Models are a key design tool in the development process and are used to test consumer reactions in both North America and Europe." There are several different sizes of routers to choose from with various amounts of power and speeds. Some people enjoy using a router with a diamond wheel accessory so they can detail glass

and ceramic items. Routers can be frustrating at first, but don't be discouraged. Practicing with a router will show you exactly what it can and can't do.

Do It Yourself investigates the history behind the current do-it-yourself craze in homebuilding and home repair. The origins of home improvement can be traced to the early part of the century when government loan programs placed home ownership within the reach of growing numbers of families, mass-circulation magazines began providing their readers with information about home remodeling and repair, and increasing numbers of Americans turned to the manual arts and handicrafts as leisure-time pursuits. World War II provided many Americans with the skills and confidence to undertake home-

---

improvement projects on their own, and after the war, changes in the manufacturing and retail of tools and equipment created new possibilities for transforming one's home. As home remodeling became a central feature of domestic life and consumer culture, the "do-it-yourself" movement was born, coming of age in the baby-boomer 1950s and 1960s, when Americans created suburban paradises and reclaimed decaying urban centers. The text of Do It Yourself, which investigates topics ranging from women's roles in home repair to historic preservation, is a lively mix of illustrations -- including period photographs, magazine spreads, and advertisements -- and clearly written analysis of the trends behind these images.

Tools powered by electric motor, compressed motor or a gasoline engine find tremendous industrial use. Used in the construction industry, drilling sanding, painting and polishing, power tools are indeed multi-dimensional in their use. The function of metalworking is done by stationary power tools. These are known as machine tools when used in the context of stationary power tools. Machine tools are generally used for metalworking and very rarely used in wood working. Instruments like drill presses and bench grinders are used for both the

functions of woodworking and metalworking. Discover everything you need to know by grabbing a copy of this ebook today.
