Text entry has never been so important as it is today. This is in large part due to the phenomenal, relatively recent success of mobile computing, text messaging on mobile phones, and the proliferation of small devices like the Blackberry and Palm Pilot. Compared with the recent past, when text entry was primarily through the standard “qwerty” keyboard, people today use a diverse array of devices with the number and variety of such devices ever increasing. The variety is not just in the devices, but also in the technologies used: Entry modalities have become more varied and include speech recognition and synthesis, handwriting recognition, and even eye-tracking using image processing on web-cams. Statistical language modeling has advanced greatly in the past ten years and so therein is potential to facilitate and

improve text entry—increasingly, the way people communicate. This book consists of four parts, and covers these areas: Guidelines for Designing Better Entry Systems (including research methodologies, measurement, and language modelling); Devices and Modalities; Languages of the world and entry systems in those languages; and variety in users and their difficulties with text entry—and the possible design and guideline solutions for those individual user groups. This book covers different aspects of text entry systems and offers prospective researchers and developers

- * global guidelines for conducting research on text entry, in terms of design strategy, evaluation methodology, and requirements;
- * history and current state of the art of entry systems, including coverage of recent research topics;
- * specific guidelines for designing entry systems for a specific target, depending on devices, modalities,

language, and different physical conditions of users

"Rain Mirror," writes Michael McClure, "stands as my most bare and forthright book. It contains two long poems, 'Haiku Edge' and 'Crisis Blossom,' which are quite disparate from one another." Together, the poems complement each other as do light and dark. "Haiku Edge" is a poem of linked haiku, often humorous, sometimes harsh, and always elegant. "Crisis Blossom," in contrast, is a long poem in three parts that records the author's "state of psyche, capillaries, muscles, fears, boldnesses, and hungers down where they exist without management," and the months of shock and recovery during a

psychophysical meltdown.

From its relatively modest debut in 1999, Blackberry has become one of the most popular technological products in the world. Research in Motion – the phenomenally successful company behind Blackberry, which began as a student start-up – has already sold over 75 million smartphones, nearly half of which were sold in the last year alone. This book is a never-before-seen, behind-the-scenes portrait of RIM and its amazing CEOs who are two of today’s most respected businessmen: Jim Balsillie and Mike Laziridis. It explores in detail not only the company’s early struggles against much larger and much better known firms, but also how RIM has been able to maintain and exceed even its own lofty expectations. With thousands of hours of interviews

with people close to the company, including unprecedented access to company founders Jim Balsillie and Mike Lazaridis (they are writing the foreword), award-winning business writer Rod McQueen has crafted an arresting narrative telling this incredible story.
