PC Mag John Wiley & Sons
After more than 30 years of reformations in agriculture, manufacturing and trade and industry, China's economy has grown to become the second largest in the world. This book examines the contributions of dynamic entrepreneurs to the economic development of mainland China and Hong Kong – an analysis that is largely lacking in existing studies China's economic stronghold. This book adopts theories of entrepreneurship and market processes as major analytical frameworks to conclude that entrepreneurship is the true engine

of growth in mainland China and Hong Kong. Chinese Entrepreneurship focuses on the knowledge drivers and systemic challenges of these businesses to examine how entrepreneurs under uncertainty identify and pursue profit opportunities, and how their efforts have enhanced China's economic dynamics. This book offers vital insight to students, teachers and researchers of Chinese business and economics, along with Chinese culture and expanding economies.

Digital Forensics for Handheld Devices Lulu.com

So you've just come up with a new ad campaign. Love the spots! Too bad no one will ever see them even worse too bad no one cares! Why is it that so much of that stuff we immediately recognize as advertising is so bad? It's not just bad well it sucks. The reason: even though it's 2010, most ad agencies and the practitioners who run them are still doing things the same way as Don Draper and the guys from Sterling Cooper on *Mad Men*, the hit AMC series that depicts Madison Avenue in the 60s. The problem today? Gone are the chain-smoking, bourbon-slugging, secretary-assaulting ad men of the 60s. Newspapers and radio are dying. Commercial TV is losing its audience to subscription-based content. Today's consumer of advertising content is mobile, prepared to DVR through commercials, and watch content on their terms online, on a hand-held device, or a Smartphone.

In *Pay No Attention to that Man behind the Curtain*, Patrick Griffin and Kevin Flynn dissect mass media advertising at an historic crossroads and explain what no longer works. Through real-world examples and biting humor, they show how to market in ways that are both creative and smart.

Innovations in Mobile Educational Technologies and Applications

Zenoscope Entertainment
Mobile Telecommunications in a High

Speed World tells the story of 3G and higher-speed mobile communication technologies. Over ten years have passed since the first third-generation (3G) licences were awarded following debates about the merits of auctions versus 'beauty contests' then, nothing much happened. More licences were issued, a few roll-outs commenced and everyone began to think it had all been a horribly expensive mistake. That may still turn out to be the case, but in the meantime there have been massive developments in terms of the number of licences and launches worldwide, in the range of services that can be accessed, in the range of devices that can be used to access them, in operator strategies etc. Even the technology has improved considerably with 4G now under discussion. Much of this story has been chronicled, largely on the Internet, but the information is in tens of thousands of bits and pieces and a large part of it is either misleading or just plain wrong. Here, Peter Curwen and Jason Whalley introduce the outcomes of research that has involved the compilation of a unique database which details every licence and launch worldwide involving 3G. The authors discuss the structure of the industry and the strategic behaviour of operators, as well as the social consequences of the spread of 3G. They examine the role of new entry upon competition, and present analysis of the main operators involved, the development of handsets and especially smartphones. A number of country case studies are included. This comprehensive and up-to-

date volume includes a number of country studies and is written by two of the world's foremost researchers on this industry. Mobile Telecommunications in a High Speed World will serve the needs of students, academics and those involved, or contemplating involvement, with the telecoms industry. Why pay thousands of dollars to consultancies to separate the wheat from the chaff with respect to 3G when you can read this book.

A Doody's Core Title 2012 This new illustrated guide to assistive technologies and devices chronicles the use of AT/AD - technology used by individuals with disabilities to perform functions that might otherwise be difficult or impossible. This book empowers people to use assistive technologies to overcome some of their physical or mental limitations and have a more equal playing field. It includes real-life examples about how people with disabilities are using assistive technology (AT) to assist them in daily tasks, and discusses emotional issues related to AT/AD.

HWM Pearson Education

These proceedings are based on the 2013 International Conference on Future Information & Communication Engineering (ICFICE 2013), which will be held at Shenyang in China from June 24-26, 2013. The conference is open to all over the world, and participation from Asia-Pacific region is particularly encouraged. The focus of this conference is on all technical aspects of electronics, information, and communications ICFICE-13 will provide an opportunity for academic and industry professionals to discuss the latest issues and progress in the area of FICE. In addition, the conference will publish high quality papers which are closely related to the various theories

and practical applications in FICE. Furthermore, we expect that the conference and its publications will be a trigger for further related research and technology improvements in this important subject.
