This open access volume provides for the first time a comprehensive description and scientific evaluation of underwater archaeological finds referring to human occupation of the continental shelf around the coastlines of Europe and the Mediterranean when sea levels were lower than present. These are the largest body of underwater finds worldwide, amounting to over 2500 find spots, ranging from individual stone tools to underwater villages with

unique conditions of preservation. The material reviewed here ranges in date from the Lower Palaeolithic period to the Bronze Age and covers 20 countries bordering all the major marine basins from the Atlantic coasts of Ireland and Norway to the Black Sea, and from the western Baltic to the eastern Mediterranean. The finds from each country are presented in their archaeological context, with information on the history of discovery, conditions of preservation and visibility, their relationship to regional changes in sea-level and coastal geomorphology, and the institutional arrangements for their investigation and protection. Editorial introductions summarise the findings from each of the major marine basins. There is also a final section with

extensive discussion of the historical background and the legal and regulatory frameworks that inform the management of the underwater cultural heritage and collaboration between offshore industries, archaeologists and government agencies. The volume is based on the work of COST Action TD0902 SPLASHCOS, a multi-disciplinary and multi-national research network supported by the EU-funded COST organisation (European Cooperation in Science and Technology). The primary readership is research and professional archaeologists, marine and Quaternary scientists, cultural-heritage managers, commercial and governmental organisations, policy makers, and all those with an interest in the sea floor

of the continental shelf and the human impact of changes in climate, sea-level and coastal geomorphology.

Do soap opera fans deserve their reputation as lonely

people, hopeless losers, or bored housewives? No, according to C. Lee Harrington and Denise D. Bielby. These authors—soap fans themselves—argue that soap fans are normal individuals who translate their soap watching into a broad range of public and private experience. People who cut across all categories of age, gender, race, ethnicity, income, education, and ideology incorporate a love of the soaps into their day-to-day leisure activities. Interviews with soap opera viewers, actors, writers, producers, directors, the daytime press, and fan club staff members reveal fascinating details about the inside world of fandom and the multitude of outlets for fan expression—clubs, newsletters, electronic bulletin boards, and public

events. Numerous examples illustrate the pleasure fans derive from critiquing characters, speculating on plot twists, and swapping memorabilia. Examining the experiences that shape fan culture, Harrington and Bielby analyze the narrative structure and various aspects of the production of the soaps. Their examination reveals that the "meaning" of soaps is complex, individualized, and not simply a reflection of the narrative content of the stories. The authors show fans who actively contemplate what it means to be a fan, and who adjust their level of involvement accordingly.

Chemical structure and bonding. The scope of the series spans the entire Periodic Table and addresses structure and bonding issues associated with all of the elements. It also focuses attention on new and developing areas of modern structural and theoretical chemistry such as nanostructures, molecular electronics, designed molecular solids, surfaces, metal clusters and supramolecular structures.

Physical and spectroscopic techniques used to determine, examine and model structures fall within the purview of Structure and Bonding to the extent that the focus is on the scientific results obtained and not on specialist information concerning the techniques themselves. Issues associated with the development of bonding models and generalizations that illuminate the reactivity pathways and rates of chemical processes are also relevant. The individual volumes in the series are thematic. The goal of each volume is to give the reader, whether at a university or in industry, a comprehensive overview of an area where new insights are emerging that are of interest to a larger scientific audience.

Songhees Pictorial presents the story of the Songhees people, the original Salish inhabitants the southern tip of Vancouver

Island, since their first contact with Europeans in 1790. It is an insightful ethno-historical account of a people and the place where they lived. When the Songhees Reserve was established in 1843 across the harbour from Fort Victoria, it became a gathering place for First Peoples throughout the region seeking trade with Europeans. This new commerce brought prosperity, conflict, disease and cultural upheaval to the Songhees and other coastal First Nations. Focusing on the old reserve, Grant Keddie presents these rapidly changing times through the eyes of outsiders, as expressed in newspaper reports and private journals, as depicted in sketches, paintings and photographs. The book features almost 200 archival images - many published here for the first time. Though these views of First Peoples in Victoria were taken through the biased lenses of non-

aboriginal photographers, Grant Keddie gives them context and perspective. Songhees Pictorial offers a rich visual history of the old Songhees Reserve, the people who lived there and the city that grew up around them. "A truly inspiring story, in gorgeous prose, about one family's journey into blueberry farming. Delicious reading." —Naomi Wolf, author of *The End of*

America The Blueberry Years is a mouth-watering and delightful memoir based on Jim Minick's trials and tribulations as an organic blueberry farmer. This story of one couple and one farm shows how our country's appetite for cheap food affects how that food is grown, who does or does not grow it, and what happens to the land. But this memoir also calls attention to the fragile nature of our global food system and our nation's ambivalence about what we eat and where it comes from. Readers of Michael Pollan and Barbara Kingsolver will savor the tale of Jim's farm and the exploration of larger issues facing agriculture in the United States—like the rise of organic farming, the plight of small farmers, and the loneliness common in rural America. Ultimately,

The Blueberry Years tells the story of a place shaped by a young couple's dream, and how that dream ripened into one of the mid-Atlantic's first certified-organic, pick-your-own blueberry farms.

From Tokyo to Helsinki,

Manhattan to Manila, Howard Rheingold takes us on a journey around the world for a preview of the next techno-cultural shift—a shift he predicts will be as dramatic as the widespread adoption of the PC in the 1980s and the Internet in the 1990s. The coming wave, says Rheingold, is the result of super-efficient mobile communications—cellular phones, personal digital assistants, and wireless-paging and Internet-access devices that will allow us to connect with anyone, anywhere, anytime. From the amusing ("Lovegetty" devices in Japan that light up when a person with the right date-potential characteristics appears in the vicinity) to the extraordinary (the overthrow of a repressive regime in the Philippines by political activists who mobilized by

forwarding text messages via cell phones), Rheingold gives examples of the fundamentally new ways in which people are already engaging in group or collective action. He also considers the dark side of this phenomenon, such as the coordination of terrorist cells, threats to privacy, and the ability to incite violent behavior. Applying insights from sociology, artificial intelligence, engineering, and anthropology, Rheingold offers a penetrating perspective on the brave new convergence of pop culture, cutting-edge technology, and social activism. At the same time, he reminds us that, as with other technological revolutions, the real impact of mobile communications will come not from the technology itself but from

how people use it, resist it, adapt to it, and ultimately use it to transform themselves, their communities, and their institutions.
