How to be Human is the only manual you need to help you upgrade your mind as much as you've upgraded your iPhone. 'With this marvellous book, Ruby Wax has confirmed her position as one of the most readable, inspirational and engaging writers in the field of human mental health, happiness and fulfilment.' Stephen Fry 'It took us 4 billion years to evolve to where we are now - completely brilliant and yet, some might say, emotionally dwarfed. The question is: can our more empathetic side catch up in time to save us and the world? I've got nothing against smarts, but it's smarts without emotional awareness that got us into this position of being able to nuke each other into oblivion and rape the earth for oil.' With a little help from a monk (who tells us how our mind works) and a neuroscientist (who tells us how our brain works), Ruby Wax answers every question you've ever had about: evolution, thoughts, emotions, the body, addictions, relationships, sex, kids, the future and compassion. Filled with witty anecdotes from Ruby's own life, and backed up by smart science and practical mindfulness exercises, How to be Human is the only manual you need to help you upgrade your mind as much as you've upgraded your iPhone. 'Ruby has beautifully fused neurology and spirituality and given us a means to cope with operating both a mind and a brain. If this mental upgrade works then all other books will become defunct as we repose in bliss.' Russell Brand 'How to Be Human is, without exaggeration, a lifeline; wise, practical and funny, it is a handbook for those in despair. It is actually for everyone alive, for the curious, or disillusioned or muddled or just plain happy.' Joanna Lumley

Inhaltsangabe: Abstract: Global competition, emerging technologies, and an ever increasing need for superior products in shorter time frames all contribute to drive companies to adopt new and innovative approaches to product innovation. Effective product innovation is imperative for the survival, growth and profitability of most design and manufacturing enterprises. In the current dynamic manufacturing environment, companies must innovate successfully if they wish to remain competitive. Product innovation is a complex, cross-functional and contingent, dynamic process, which is difficult to manage. Anticipating change and expeditiously responding to the dynamics of the business environment via product innovation are important precursors for achieving sustainable competitive positions and exceptional performance. The heart of a product innovation is its value. Traditional discounted cash flow approaches, such as net present value (NPV), have traditionally been the preferred methods for evaluating investments in product innovation. The traditional NPV method, which was initially developed to value bonds or stocks by passive investors, implicitly assumes that corporations hold a collection of real assets passively. Managerial choices (as delay, expand, switching etc.) are thus presumed to be limited to the initial decision. Therefore, traditional valuation methods undervalue the product innovation because they are unable to capture the value

of management flexibility. Recently, real options emerged as an alternative to simplistic discounted cash flow methods. Real option valuation (ROV) values the managerial flexibility to make ongoing decisions regarding implementation of investment projects and deployment of real assets. ROV extends valuation models used to price financial options and applies them to investments in real assets. Black and Scholes developed the Black-Scholes model to value financial options that focus on factors affecting the value of the underlying financial asset over time. Proof by Cox, Ross, Rubinstein (1979), binomial tree model is simpler to understand for the practitioner and less elegant than Black-Scholes model. It uses the discrete mathematics to achieve the isomorphic results to the calculation used by Black-Scholes model. From an intuition point of view, the managerial flexibility is easy to understand. But, how much it is worth is most difficult or even impossible to think about and measure with the traditional [...]

How can you evaluate a potential investment if there are several possibilities to change the course of action in the future depending on different emerging situations? And even more challenging: How can you do so if you cannot come up with point estimates - but you have to use several ranges of input values? Both - managerial flexibility as well as so called continuous uncertainty - are highly relevant as they reflect most of the investment decisions realistically. But if you apply standard valuation techniques like a simple Discounted Cash Flow model, the computed value will be significantly distorted, potentially prompting you to make a wrong decision. Given the practical urgent need for a suitable valuation technique, the real option valuation approach was developed as an advanced valuation approach. It follows a non-trivial but doable four-step process, quantifying the value of investments in situations of managerial flexibility and continuous uncertainty. While real option valuation is considered to be an opaque technique, Ms. Kang proves that it can be explained in an understandable way, even for someone approaching the matter with limited or no prior exposure to the topic. The author outlines the major issues of current product innovation valuation with traditional valuation techniques. On the basis of this analysis she explains the basic concepts of valuing product innovation through the use of real option valuation. Supported by a few practical examples the author clarifies how to value different types of real options. So based on the actual Financial Statement 2006 of Research In Motion (RIM), the author develops a

sample 5-year business plan for the product innovation of BlackBerry 9900. This is done through the highly advanced model of Binomial Trees. Overall with this thesis, you'll get a head-start into one of the more advanced management tools - the real option valuation.
