Are you doing everything you can to make sure your breasts are healthy? If this question gives you pause, you're not alone. Confusing media and conflicting advice surrounding breast health can make it challenging to know what's best. In the United States this year, more than 40,000 women will die from breast cancer. Dr. John G. West wants to help you avoid becoming part of that statistic through preventative methods and screenings. And for women who are diagnosed, Dr. West provides guidance and wisdom to make the best possible treatment decisions. For nearly 20 years, Dr. West has focused on giving his patients the best care possible when they show up for diagnosis or treatment. The question he gets most often from his patients is: "What would you tell me if I were your wife or daughter?" Prevent, Survive, Thrive: Every Woman's Guide to Optimal Breast Care is the answer. Drawing from the latest scientific findings in the field of breast care, Dr. West outlines the things most women don't know about

screening, like when you should insist on an ultrasound instead of only relying on mammogram results or how to determine if you should get genetic testing—and what it can and cannot tell you about your cancer risk. He lets you know exactly what kind of pain is normal and what should be investigated further. Dr. West even offers lifestyle advice to help lower your risk factors; things as small as how often you exercise or where you carry your cell phone can have an impact on your future health. Prevent,

Around the world, SCADA (supervisory control and data acquisition) systems and other real-time process control networks run mission-critical infrastructure--everything from the power grid to water treatment, chemical manufacturing to transportation. These networks are at increasing risk due to the move from proprietary systems to more standard platforms and protocols and the interconnection to other networks. Because there has been limited attention paid to security, these systems are seen as largely unsecured and very vulnerable to attack. This book addresses currently undocumented security issues affecting SCADA systems and overall critical infrastructure protection. The respective co-authors are among the leading experts in the world capable of addressing these related-but-independent concerns of SCADA security. Headline-making threats and countermeasures like malware, sidejacking, biometric applications, emergency communications, security awareness planning,

personnel & workplace preparedness and bomb threat planning will be addressed in detail in this one of a kind book-of-books dealing with the threats to critical infrastructure protection. They collectively have over a century of expertise in their respective fields of infrastructure protection. Included among the contributing authors are Paul Henry, VP of Technology Evangelism, Secure Computing, Chet Hosmer, CEO and Chief Scientist at Wetstone Technologies, Phil Drake, Telecommunications Director, The Charlotte Observer, Patrice Bourgeois, Tenable Network Security, Sean Lowther, President, Stealth Awareness and Jim Windle, Bomb Squad Commander, CMPD. - Internationally known experts provide a detailed discussion of the complexities of SCADA security and its impact on critical infrastructure - Highly technical chapters on the latest vulnerabilities to SCADA and critical infrastructure and countermeasures - Bonus chapters on security awareness training, bomb threat planning, emergency communications, employee safety and much more -
