If you thought that the app market was just about games and big brands, think again. Businesses of every size in every sector have built their own apps and are reaping real commercial rewards. Because of the relatively low cost of entering the app market, smaller enterprises can level the playing field, often outstripping their larger competitors simply because they have developed and marketed an app that delivers a service that their consumers are looking for. This book isn't about how apps can help you run your business more efficiently, or an in-depth tutorial about how to create

an app for your enterprise. Instead, it provides a unique introduction and overview of the possibilities for any small or growing business. It's a focused guide about the business of apps for those whose time is money. Connecting with customers over their mobile phones and tablets allows a more intimate and ultimately more lucrative link between businesses and consumers to be established. With this latest book in the popular Business Bites series, you can help your business take the first steps into an exciting and growing marketplace.

Business failure is not limited to start-ups. In America alone between 1990 and 2000, there were over 6.3 million business start-ups and over 5.7 million business shut-downs. Risk of failure can be greatly reduced through effective organisational design that encourages high performance and adaptability to changing circumstances. Organisation

design is a straightforward business process but curiously managers rarely talk about it and even more rarely take steps to consciously design or redesign their business for success. This new Economist guide explores the five principles of effective organisation design, which are that it must be: driven by the business strategy and the operating context (not by a new IT system, a new leader wanting to make an impact, or some other non-business reason). involve holistic thinking about the organisation be for the future rather than for

now not to be undertaken lightly—it is resource intensive even when going well be seen as a fundamental process not a repair job. (Racing cars are designed and built. They are then kept in good repair.)
