A while back I wrote a document called "Building a Cloud Service". It was basically a document detailing my past experiences and details some of the issues that a cloud company may face as it is being built and run. Based on what had transpired since, a lot of the concepts mentioned in that particular document are becoming widely adopted and/or are trending towards them. This is a continuation of that particular document and will attempt to analyse the issues that are faced as we move towards the cloud especially with regards to to media and IT convergence. Once again, we will use past experience, research, as well as current events trends in order to write this particular report. I hope that this document will prove to be equally useful and will provide an insight not only to the current state of affairs but will provide a blueprint for those who may be entering the sector as well as those who may be using resources/services from this particular sector. Please note that this document has gone through many revisions and drafts may have gone out over time. As such, there will be concepts that may have been picked up and adopted by some organisations (as was the case with the “Cloud” document with several technologies) while others may have simply broken cover while this document was being drafted and sent out for comment. It also has a more strategic/business slant when compared to the original document which was more technically orientated. Feedback/credit on any ideas that are subsequently put into action based on the content of this document would be appreciated. Any feedback on the content of this document is welcome. Every attempt has been made to ensure that the instructions and information herein are accurate and reliable. Please send corrections, comments, suggestions and questions to the author. Over time, overemphasis and adherence to the same proven routines that helped your organization achieve success can also lead to its decline resulting from organizational inertia, complacency, and inflexibility. Drawing lessons from one of the best models of success, the evolutionary model, Inverting the Paradox of Excellence explains why your organization must proactively seek out changes or variations on a continuous basis for ensuring excellence by testing out a continuum of opportunities and advantages. In other words, to maintain excellence, the company must be in a constant state of flux! The book introduces the patterns and anti-patterns of excellence and includes detailed case studies based on different dimensions of variations, including shared values variations, structure variations, and staff variations. It presents these case studies through the prism of the "variations" idea to help you visualize the difference of the "case history" approach presented here. The case studies illustrate the different dimensions of business variations available to help your organization in its quest towards achieving and sustaining excellence. The book extends a set of variations inspired by the pioneering McKinsey 7S model, namely shared values, strategy, structure, stuff, style, staff, skills, systems, and sequence. It includes case history segments for Toyota, Acer, eBay, ABB, Cisco, Blackberry, Tata, Samsung, Volvo, Charles Schwab, McDonald's, Scania, Starbucks, Google, Disney, and NUMMI. It also includes detailed case histories of GE, IBM, and UPS.

Entrepreneurship has regained centre stage in the contemporary knowledge-intensive and innovation-driven economy, as well as in research. Integrating classic and recent insights into the organization, economics and management of entrepreneurial activities, Organizing Entrepreneurship aims to blend rigor with relevance, and connects theory with practical problems around key questions, such as: Is there any method in having ‘good ideas’ and discovering opportunities? Through which mechanisms can human, social, technical and financial resources be attracted and dedicated to new projects? Which alternative governance and organizational structures are to be considered for the constitution and organization of a new firm? To grow or not to grow? (Or how to grow without up-sizing)? How do you organize grown-up firms in an entrepreneurial mode? How can environments and external institutions help? Original case studies are discussed and integrated throughout the text, which reflect a wide range of sectors (from agri-business to high tech) and countries (including emerging economies). Providing a unique resource for students and instructors of entrepreneurship and organization, this book also offers new insights to entrepreneurs and investors in the organization of new firms, as well as to managers striving to infuse entrepreneurial behaviors into their already established firms.
