An examination of the mix of face-to-face and digital methods that young people use in their experiments with civic engagement. Although they may disavow politics as such, civic-minded young people use every means and media at their

disposal to carry out the basic tasks of citizenship. Through a mix of face-to-face and digital methods, they deliberate on important issues and debate with peers and powerbrokers, redefining some key dynamics that govern civic life in the process. In *Participatory Politics*, Elisabeth Soep examines the specific tactics used by young people as they experiment with civic engagement. Drawing on her scholarly research and on her work as a media producer and educator, Soep identifies five tactics that are part of effective, equitable participatory politics among young people: Pivot Your Public (mobilizing civic capacity within popular culture engagements); Create Content Worlds (using inventive and interactive storytelling that sparks sharing); Forage for Information in public data archives; Code Up (using computational thinking to design tools, platforms, and spaces for public good); and Hide and Seek (protecting privacy and information sources). After describing these tactics as they manifest themselves in a range of youth-driven activities—from the runaway spread of the video Kony 2012 to community hackathons—Soep discusses concrete ideas for cultivating the new literacies that will enable young people to participate in public life. She goes on to consider some risks associated with these participatory tactics, including simplification and sensationalism, and ways to avoid them, and concludes with implications for future research and practice.

Since 1958 the Maritime Administration has continuously conducted instructions in use of collision avoidance radar for qualified U.S. seafaring personnel and representatives of interested Federal and State Agencies. Beginning in 1963, to facilitate the expansion of training capabilities and at the same time to provide the most modern techniques in training methods, radar simulators were

installed in Maritime Administration's three region schools. It soon became apparent that to properly instruct the trainees, even with the advanced equipment, a standardize up-to-date instruction manual was needed. The first manual was later revised to serve both as a classroom textbook and as an onboard reference handbook. This newly updated manual, the fourth revision, in keeping with Maritime Administration policy, has been restructured to include improved and more effective methods of plotting techniques for use in Ocean, Great Lakes, Coastwise and Inland Waters navigation. On the ever-decreasing distinction between those who produce digital data, those who design its visualization and those who use it as a new form of cartography Mapmaking has been an essential part of human development since ancient times: through the art of cartography, people have been able to record geographical explorations and communicate spatial information in relation to themselves and the land around them, using fixed points and lived experiences as references. In the digital age, maps are just as likely to convey the relationships between individual users and amorphous data as they are to depict the relationships between human beings and the stars and

planets above. Blind Maps and Blue Dotsexamines the impact of the omnipresent computer on current understandings of data visualization and graphic design, in which the boundaries between producers and users of maps has become increasingly blurred. This text is structured around three contemporary mapmaking practices: Google Maps' location function, referred to as the Blue Dot; a global map that displays the physical activity of users of the fitness app Strava; and the "Situation in Syria" maps series, a regularly updated map of the Syrian conflict designed by an Amsterdam teenager. Like every other field, graphic design must evolve to reflect the modern world and the needs of its people. Blind Maps and Blue Dotsoffers a new approach that acknowledges and even encourages the breakdown of the binary between producer and user.

From their haunts in the shadowy corner of a bar, front and center at a convenience store, or reigning over a massive mall installation bursting with light, sound, and action, arcade games have been thrilling and addicting quarter-bearers of all ages ever since Pong first lit up its paddles. Whether you wanted a few minutes' quick-twitch exhilaration or the taste of three-initial immortality that came with topping the high score screen, you could get it from the diverse range of space shooters, dot-eating extravaganzas, quirky beat-'em-ups, and more that have helped define pop culture for more than four decades. In *Attract Mode: The Rise and Fall of Coin-Op Arcade Games*, author Jamie Lendino celebrates both the biggest blockbusters (Pac-Man, Star Wars: The Arcade Game) and the forgotten gems (Phoenix, Star Castle) of the Golden Age of coin-op gaming, and pulls back the curtain on the personalities and the groundbreaking technologies that brought them to glitzy, color-drenched life in the U.S., Japan, and all over the world. You'll start your journey exploring the electromechanical attractions and pinball games of the early 20th century. Next, you'll meet the earliest innovators, who used college computers and untested electronics to outline the possibilities of the emerging form, and discover the surprising history behind the towering megahits from Nintendo, Sega, and others that still inform gaming today. Then you'll witness the devastating crash that almost ended it all—and the rebirth no

one expected. Whether you prefer the white-knuckle gameplay of Robotron: 2084, the barrel-jumping whimsy of Donkey Kong, or the stunning graphics and animation of Dragon's Lair, Attract Mode will transport you back to the heyday of arcade games and let you relive—or experience for the first time—the unique magic that transformed entertainment forever.

- Advance reviews of Certain to Win • Annotated Table of Contents "The book is both an excellent primer for those new to Boyd and a catalyst to those with business experience trying to internalize the relevance of Boyd's thinking." Chuck Leader, LtCol USMC (Ret.) and information technology company CEO; "A Winning Combination," Marine Corps Gazette, March 2005. Certain to Win [Sun Tzu's prognosis for generals who follow his advice] develops the strategy of the late US Air Force Colonel John R. Boyd for the world of business. The success of Robert Coram's monumental biography, Boyd, the Fighter Pilot Who Changed the Art of War, rekindled interest in this obscure pilot and documented his influence on military matters ranging from his early work on fighter tactics to the USMC's maneuver warfare doctrine to the planning for Operation Desert Storm. Unfortunately Boyd's written legacy, consisting of a single paper and a four-set cycle of briefings, addresses strategy only in war. [All of Boyd's briefings are available on Defense and the National Interest.] Boyd and Business Boyd did study

business. He read everything he could find on the Toyota Production System and came to consider it as an implementation of ideas similar to his own. He took business into account when he formulated the final version of his “OODA loop” and in his last major briefing, Conceptual Spiral, on science and technology. He read and commented on early drafts of this manuscript, but he never wrote on how business could operate more profitably by using his ideas. Other writers and business strategists have taken up the challenge, introducing Boyd’s concepts and suggesting applications to business. Keith Hammonds, in the magazine Fast Company, George Stalk and Tom Hout in Competing Against Time, and Tom Peters most recently in Re-imagine! have described the OODA loop and its effects on competitors. They made significant contributions. Successful businesses, though, don’t concentrate on affecting competitors but on enticing customers. You could apply Boyd all you wanted to competitors, but unless this somehow caused customers to buy your products and services, you’ve wasted time and money. If this were all there were to Boyd, he would rate at most a sidebar in business strategy. Business is not War Part of the problem has been Boyd’s focus on war, where “affecting competitors” is the whole idea. Armed conflict was his life for nearly 50 years, first as a fighter pilot, then as a tactician and an instructor of fighter pilots, and after his retirement, as a military philosopher. Coram describes (and I know from personal experience) how his quest consumed Boyd virtually every waking hour. It was not a monastic existence, though, since John was above everything else a competitor and loved to argue over beer and cigars far into the night. During most of the 1970s and 80s he worked at the Pentagon, where he could share ideas and debate with other strategists and practitioners of the art of war. The result was the remarkable synthesis we know as Patterns of Conflict. Discussions about generals and campaigns, however, did not give Boyd much insight into competition in other areas,

company that toppled global giants before succumbing to the ruthlessly competitive forces of Silicon Valley. This is not a conventional tale of modern business failure by fraud and greed. The rise and fall of BlackBerry reveals the dangerous speed at which innovators race along the information superhighway. With unprecedented access to key players, senior executives, directors and competitors, Losing the Signal unveils the remarkable rise of a company that started above a bagel store in Ontario. At the heart of the story is an unlikely partnership between a visionary engineer, Mike Lazaridis, and an abrasive Harvard Business school grad, Jim Balsillie. Together, they engineered a pioneering pocket email device that became the tool of choice for presidents and CEOs. The partnership enjoyed only a brief moment on top of the world, however. At the very moment BlackBerry was ranked the world's fastest growing company internal feuds and chaotic growth crippled the company as it faced its gravest test: Apple and Google's entry in to mobile phones. Expertly told by acclaimed journalists, Jacquie McNish and Sean Silcoff, this is an entertaining, whirlwind narrative that goes behind the scenes to reveal one of the most compelling business stories of the new century.
