There are three
audiogram forms
from which to
choose: The
Standard Blank
Audiogram is a
basic ANSI form.
It has the standard
column width at
125, 250 and 500
Hz. The Speech
Weighted
Audiogram (10
db) is designed
specifically to
follow the Speech
Intelligibility
Index. Although
this is not an
ANSI audiogram,
it is scientifically
based.

audiogram key

An audiogram is
the result of a
hearing test and
it shows you the
extent of any
hearing loss in
either ear. During
a hearing test
you are tested
for your ability to
hear different
tones and these
are plotted from
left to right on

the audiogram, low
pitch tones on the
left, moving to
high pitch sounds
on the right. ...
Frequency (pitch)
and decibel
(loudness) level for
hearing ...

If you are suffering
from a hearing
impairment, your
results will be
documented on an
audiogram. An
audiogram is
created after you
take a pure-tone
hearing test, to map
out the type, degree,
and configuration
of your hearing
loss. The audiogram
shows your hearing
loss by frequency,
as pitch and
loudness of sounds
change.
