Other Powerful Web Tools for Classrooms Springer
Online social media have transformed the face of human interaction in the 21st century. Wikis, blogs, online groups and forums, podcasts, virtual worlds, and social tagging are but a few of the applications enabling innovative behaviors that support acquisition, access, manipulation, retrieval, and visualization of information. It is, therefore, no surprise that educational practitioners and theorists have begun to explore how social media can be harnessed to describe and implement new paradigms for communication, learning, and education. The editors' goal in publishing this book was to identify original research on the application of online social media and related technologies in education as well as emerging applications in Web technologies that could provide and shape future educational platforms. The selected contributions deal with questions such as how social media can truly enrich and enhance learning and teaching experiences in ways not otherwise possible; how learning can be integrated in a distributed and ubiquitous social computing environment; or what theories, paradigms, and models are applicable for the support of social

computing in education. Researchers in education or educational software will find interesting and sometimes provocative chapters on paradigms and methodologies, virtual and mobile learning spaces, and assessment and social factors. Practitioners in these fields will benefit from an additional section devoted to case studies and first experience reports.

If IPv6 is to be adopted on a large scale, the applications running on desktop systems, laptops, and even mobile devices need to work just as well with this protocol as they do with IPv4. This concise book takes you beyond the network layer and helps you explore the issues you need to address if you are to successfully migrate your apps to IPv6. It's ideal for application developers, system/network architects, product managers, and others involved in moving your network to IPv6. Explore changes you need to make in your application's user

interface Make sure your application is retrieving correct information from DNS Evaluate your app ' s ability to store and process both IPv6 and IPv4 addresses Determine if your app exposes or consumes APIs where there are IP address format dependencies Work with the network layer to ensure the transport of messages to and from your app Incorporate IPv6 testing into your plans, and use the correct IPv6 addresses in your documentation Migrating Applications to IPv6 Routledge Knowing the best and easiest ways to use dynamic digital resources helps teachers and students alike thrive in today's classroom. Tools for Classrooms

Routledge Digital resources—from games to blogs to social networking—are strong forces in education today, but how can those tools be effectively utilized by educators and course designers in higher education? Filled with practical advice, the e-Learning and Social Networking Handbook, Second Edition provides a comprehensive overview of online learning tools and offers strategies for using these resources in course design, highlighting some of the most relevant and challenging topics in e-learning today, including:

- using social networking for educational purposes
- designing for a distributed environment
- strengths and weaknesses of delivering content in various formats (text, audio, and video)
- potential constraints on course design
- implementation, evaluation, induction, and training

Illustrated by short, descriptive case studies, the e-Learning and Social Networking Handbook, Second Edition also directs the reader to useful resources that will

enhance their course design. This helpful guide will be invaluable to all those involved in the design and delivery of online learning in higher education. Handbook of Research on Web 2.0 and Second Language Learning "O'Reilly Media, Inc." Presents information on Websites and applications that make up the new online community known as Web 2.0. How to Do Everything with Your Web 2.0 Blog Teachers College Press "This book investigates how those involved in education can respond to the opportunities offered by the Web 2.0 technology"--Provided by publisher. Learning on the Blog Teaching Resources More and more educational scenarios and learning landscapes are developed using blogs, wikis, podcasts and e-portfolios. Web 2.0 tools give learners more control, by allowing them to easily create, share or reuse their own learning materials, and these tools also enable social learning networks that bridge the border between formal and informal learning. However, practices of strategic innovation of universities, faculty development, assessment, evaluation and quality assurance have not fully accommodated these

changes in technology and teaching. Ehlers and Schneckenberg present strategic approaches for innovation in universities. The contributions explore new models for developing and engaging faculty in technology-enhanced education, and they detail underlying reasons for why quality assessment and evaluation in new – and often informal – learning scenarios have to change. Their book is a practical guide for educators, aimed at answering these questions. It describes what E-learning 2.0 is, which basic elements of Web 2.0 it builds on, and how E-learning 2.0 differs from Learning 1.0. The book also details a number of quality methods and examples, such as self-assessment, peer-review, social recommendation, and peer-learning, using illustrative cases and giving practical recommendations. Overall, it offers a step-by-step guide for educators so that they can choose their own quality assurance or assessment methods, or develop their own evaluation methodology for specific learning scenarios. The book addresses everyone involved in higher education – university leaders, chief information officers, change and quality assurance managers, and faculty developers. Pedagogical advisers and consultants will find new

insights and practices for the integration and management of novel learning technologies in higher education. The volume fosters in lecturers and teachers a sound understanding of the need and strategy for change, and it provides them with practical recommendations on competence and quality methodologies.
