An eye-opening exploration of blood, the lifegiving substance with the power of taboo, the value of diamonds and the promise of breakthrough science Blood carries life, yet the sight of it makes people faint. It is a waste product and a commodity pricier than oil. It can save lives and transmit deadly infections. Each one of us has roughly nine pints of it, yet many don't even know their own blood type. And for all its ubiquitousness, the few tablespoons of blood discharged by 800 million women are still regarded as taboo: menstruation is perhaps the single most demonized biological event. Rose George, author of The Big Necessity, is renowned for her intrepid work on topics that are invisible but vitally important. In Nine

Pints, she takes us from ancient practices of bloodletting to the breakthrough of the "liquid biopsy," which promises to diagnose cancer and other diseases with a simple blood test. She introduces Janet Vaughan, who set up the world's first system of mass blood donation during the Blitz, and Arunachalam Muruganantham, known as "Menstrual Man" for his work on sanitary pads for developing countries. She probes the lucrative business of plasma transfusions, in which the US is known as the "OPEC of plasma." And she looks to the future, as researchers seek to bring synthetic blood to a hospital near you. Spanning science and politics, stories and global epidemics, Nine Pints reveals our life's blood in an entirely new light. Nine Pints was named one of Bill Gates recommended summer reading titles for 2019. During the early years of the AIDS epidemic, thousands of Americans became infected with HIV through the nation's blood supply. Because little reliable information existed at the time AIDS first began showing up in hemophiliacs and in others who had received transfusions, experts disagreed about whether blood and blood products could transmit the disease. During this period of great uncertainty, decision-making regarding the blood supply became increasingly difficult and fraught with risk. This volume provides a balanced inquiry into the blood safety controversy, which involves private sexual practices, personal tragedy for the victims of HIV/AIDS, and public confidence in America's blood services system. The book focuses on critical decisions as information about the danger to the blood supply emerged. The committee draws conclusions about what was done and recommends what should be done to produce better outcomes in the face of future threats to blood safety. The committee frames its analysis around four critical areas: Product treatment and testing "Could effective methods for inactivating HIV in blood have been introduced sooner? Donor screening and referral "including a review of screening to exclude high-risk individuals. Regulations and recall of contaminated blood "analyzing decisions by federal agencies and the private sector. Risk communication "examining whether infections could have been averted by better communication of the risks.

Finally, after 25 years of incubation, Peter Gorman's book is out.

Ayahuasca in My Blood - 25 Years of

Medicine Dreaming concerns his longstanding relationship with the Amazonian visionary medicine. Here's what people have said about it: "Unlike many writing about ayahuasca, Peter Gorman knows this plant and these forests long and well. Explorer, ethnobotanist, writer and raconteur - Gorman is uniquely qualified to tell this incredible tale. A wild mixture of adventure, horror, spirituality, tenderness, and insight, Ayahuasca in My Blood is most highly recommended!" -- Mark J. Plotkin, Ph.D, President, Amazon Conservation Team and author of Tales of a Shaman's Apprentice. "Long before ayahuasca tourism became a pastime for rich gringos, Peter Gorman was knocking around Iquitos and the Amazon. He's traveled the rivers and quaffed the brew with the best (and the worst) of them and been way, way beyond the chrysanthemum on many a dark jungle night. This is the intensely personal story of an old-school jungle rat for whom ayahuasca is not just a hobby, but a life-long quest." -- Dennis McKenna, Ph.D, noted ethnopharmacologist, co-author of The Invisible Landscape, co-founder of the Institute of Natural Products Research and founding board member of the Heffter Research Institute. "I have known and traveled with Peter for almost a decade and was present for a number of the events he included in this book as well as many others. Don Julio was the most powerful man I have ever had the privilege of knowing. Further, as a trained scientist I believe the plant medicine truly offers a doorway to a rich world that needs to be understood in our postmodern lives. This is destined to become a must read for anyone who is serious about understanding the world of the shaman." -- Lynn Chilson - CEO Chilson Enterprises, Inc.

"In the early morning of February 24, 1984, Janet Cannon Myers, a beautiful young mother, poet, and dancer, was found dead, lying amid an explosion on her living-room floor. There were only two men in the whole world who could possibly have committed the deed: her husband, Kerry, and one of his closest friends, Bill Fontanille." "The media blitz immediately after the murder featured stories of a badly injured, grieving husband, an all-night fight-and-hostage situation as he vainly tried to protect his

family, his desperate call to the police, and charges against Bill Fontanille (the scorned lover?) for attacking Kerry Myers, almost killing his two-and-a-half-year-old son, and bludgeoning to death Kerry's wife." "But upon close examination of Kerry's and Bill's statements to the police, the prosecutor's office found a troubling coincidence: Their accounts of what happened were virtual mirror images, the stories all but identical, except that each accused the other of attacking him with either a knife or a bat immediately upon entry into the Myers house that late Thursday afternoon. Each man vowed his innocence; in fact, each man said he hadn't even seen Janet during that long evening, much less her corpse." "After four grand juries and three trials over seven years, both men were sent to prison, yet no one - including the judge and jury who convicted them and the district attorney's office that prosecuted them - has been able to determine who did what to whom and why. Perhaps until now, that is." "Through hundreds of interviews, exhaustive research in thousands of pages of documents, and exclusive access to both Kerry Myers and Bill Fontanille, Joe Bosco has done what the media, the courts, and all the family members and friends of the victim and the suspects have never been able to do - break open the sordid vault that holds so many of even the best family's secrets and lay bare all that is necessary for you to understand and then render your verdict upon what actually happened that horrific night." "Blood Will Tell is the story of a quiet New Orleans suburb whose deceptive calm is shattered by unimaginable savagery; a world where seemingly perfect marriages cover up histories of constant abuse; where close friendships are betrayed for sex; where loyalty and love are forgotten in the grip of ambition and greed. Bosco sketches indelible portraits of the victim and the accused, exposing passions and flaws that made this tragedy inevitable." "Blood Will Tell is also a riveting legal thriller, a page-turning succession of back-and-forth accusations, of judgments and

reversals of court opinions. For ten years this extraordinary case has gripped New Orleans, Hollywood, and the national media. With the shattering revelations in this book, it is certain to endure as a legal phenomenon and a landmark in the U.S. criminal justice system for decades to come."--BOOK JACKET.

NEW YORK TIMES BESTSELLER • An urgent wake-up call about the future of emerging viruses and a gripping account of the doctors and scientists fighting to protect us, told through the story of the deadly 2013–2014 Ebola epidemic “Crisis in the Red Zone reads like a thriller. That the story it tells is all true makes it all more terrifying.” —Elizabeth Kolbert, Pulitzer Prize–winning author of *The Sixth Extinction* From the #1 bestselling author of *The Hot Zone*, now a National Geographic original miniseries . . . This time, Ebola started with a two-year-old child who likely had contact with a wild creature and whose entire family quickly fell ill and died. The ensuing global drama activated health professionals in North America, Europe, and Africa in a desperate race against time to contain the viral wildfire. By the end—as the virus mutated into its deadliest form, and spread farther and faster than ever before—30,000 people would be infected, and the dead would be spread across eight countries on three continents. In this taut and suspenseful medical drama, Richard Preston deeply chronicles the pandemic, in which we saw for the first time the specter of Ebola jumping continents, crossing the Atlantic, and infecting people in America. Rich in characters and conflict—physical, emotional, and ethical—*Crisis in the Red Zone* is an immersion in one of the great public health calamities of our time. Preston writes of doctors and nurses in the field putting their own lives on the line, of government bureaucrats and NGO administrators moving, often fitfully, to try to contain the outbreak, and of pharmaceutical companies racing to develop drugs to combat the virus. He also explores the charged ethical dilemma over who should and did receive the rare doses of an experimental treatment when they became available at the peak of the disaster. *Crisis in the Red Zone* makes clear that the outbreak of 2013–2014 is a harbinger of further, more severe outbreaks, and of emerging viruses heretofore unimagined—in any country, on any continent. In our ever more interconnected world, with roads and towns cut deep into the jungles of equatorial Africa, viruses both familiar and undiscovered are being unleashed

into more densely populated areas than ever before. The more we discover about the virosphere, the more we realize its deadly potential. *Crisis in the Red Zone* is an exquisitely timely book, a stark warning of viral outbreaks to come.

Her name was Henrietta Lacks, but scientists know her as HeLa. She was a poor Southern tobacco farmer who worked the same land as her slave ancestors, yet her cells—taken without her knowledge—became one of the most important tools in medicine: The first “immortal” human cells grown in culture, which are still alive today, though she has been dead for more than sixty years. HeLa cells were vital for developing the polio vaccine; uncovered secrets of cancer, viruses, and the atom bomb’s effects; helped lead to important advances like in vitro fertilization, cloning, and gene mapping; and have been bought and sold by the billions. Yet Henrietta Lacks remains virtually unknown, buried in an unmarked grave. Henrietta’s family did not learn of her “immortality” until more than twenty years after her death, when scientists investigating HeLa began using her husband and children in research without informed consent. And though the cells had launched a multimillion-dollar industry that sells human biological materials, her family never saw any of the profits. As Rebecca Skloot so brilliantly shows, the story of the Lacks family—past and present—is inextricably connected to

the dark history of experimentation on African Americans, the birth of bioethics, and the legal battles over whether we control the stuff we are made of. Over the decade it took to uncover this story, Rebecca became enmeshed in the lives of the Lacks family—especially Henrietta’s daughter Deborah. Deborah was consumed with questions: Had scientists cloned her mother? Had they killed her to harvest her cells? And if her mother was so important to medicine, why couldn’t her children afford health insurance? Intimate in feeling, astonishing in scope, and impossible to put down, *The Immortal Life of Henrietta Lacks* captures the beauty and drama of scientific discovery, as well as its human consequences.

Sometimes it’s best to leave the past alone. For when biographer Martin Nanther looks into the life of his famous great-grandfather Henry, Queen Victoria’s favorite physician, he discovers some rather unsettling coincidences, like the fact that the doctor married the sister of his recently murdered fiancée. The more Martin researches his distant relative, the more fascinated—and horrified—he becomes. Why did people have a habit of dying around his great grandfather? And what did his late daughter mean when she wrote that he’s done “monstrous, quite appalling things”? Barbara Vine (a.k.a. Ruth Rendell) deftly weaves this story of an eminent Victorian with a modern yarn about the embattled biographer, who is watching the House of Lords prepare to annul membership for hereditary peers and thus strip him of his position. Themes of fate and family snake throughout this teasing psychological suspense, a typically chilling tale from a master of the genre.

**NATIONAL BESTSELLER •** The gripping story of Elizabeth Holmes and Theranos—one of the biggest corporate frauds in history—a tale of ambition and hubris set amid the bold promises of Silicon Valley, rigorously reported by the prize-winning journalist. With a new Afterword covering her trial and sentencing, bringing the story to a close. “Chilling ... Reads like a thriller ... Carreyrou tells [the Theranos story] virtually to perfection.” —*The New York Times Book Review*

In 2014, Theranos founder and CEO Elizabeth Holmes was widely seen as the next Steve Jobs: a brilliant Stanford dropout

whose startup “unicorn” promised to revolutionize the medical industry with its breakthrough device, which performed the whole range of laboratory tests from a single drop of blood. Backed by investors such as Larry Ellison and Tim Draper, Theranos sold shares in a fundraising round that valued the company at more than \$9 billion, putting Holmes’ worth at an estimated \$4.5 billion. There was just one problem: The technology didn’t work. Erroneous results put patients in danger, leading to misdiagnoses and unnecessary treatments. All the while, Holmes and her partner, Sunny Balwani, worked to silence anyone who voiced misgivings—from journalists to their own employees.

**TIES THAT BIND...** Danai Liao-Centrella is many things: Solaris gladiator; proud military commander; successful diplomat. All of those roles pale beneath perhaps the heaviest responsibility of anyone in the Capellan Confederation: to speak the truth to its ruler, Chancellor Daoshen Liao. He is the undeniable dictator of hundreds of worlds. Mighty armies move at his command. Billions of lives hang on his every decision. Against that, she must speak the truth. And the truth is, the war with House Davion must end. Because there is a greater danger looming: the Republic of the Sphere, hiding behind its impenetrable fortress. When that wall comes down, the Confederation must be ready. It cannot be distracted. Danai will pay whatever price necessary to make Daoshen see that. And that price will be heavy. It will force her to take on a role unlike any other: servant of the people. In the Confederation, the people are the heart of the state. When—not if—the wall falls, Danai and her regiment will be ready. They'll have to be ready, because behind the wall the Republic regiments are finally ready to come out of hiding. On worlds like Elgin, Hall, and Liberty, Republic forces are prepared: well-trained, and armed with weapons the Capellans have never seen. When BattleMechs clash, Danai will have to choose between serving the

Chancellor or serving the people.

**Know Your Blood, Know Your Health** Bloomsbury Publishing  
The New York Times – bestselling author of *How to Make a Spaceship* presents the remarkable, uplifting story of a life-saving medical breakthrough. In 1951 in Sydney, Australia, a fourteen-year-old boy named James Harrison was near death when he received a transfusion of blood that saved his life. A few years later, and half a world away, a shy young doctor at Columbia University realized he was more comfortable in the lab than in the examination room. Neither could have imagined how their paths would cross, or how they would change the world. In *Good Blood*, Julian Guthrie tells the gripping tale of the race to cure Rh disease, a horrible blood disease that caused a mother’s immune system to attack her own unborn child. The story is anchored by two very different men on two continents: Dr. John Gorman in New York, who would land on a brilliant yet contrarian idea, and an unassuming Australian whose almost magical blood—and his unyielding devotion to donating it—would save millions of lives. *Good Blood* takes us from research laboratories to hospitals, and even into Sing Sing prison, where experimental blood trials were held. It is a tale of discovery and invention, the progress and pitfalls of medicine, and the everyday heroics that fundamentally changed the health of women and babies.

Driving home one rainy night, Cassie Larkin sees a man and woman fighting on the side of the road. After calling 911, she makes a split-second decision that will throw her suburban life into chaos. Against

---

the dispatcher ' s advice, she gets out of her minivan and confronts the attacker. That ' s when he turns on her and spits out a chilling ultimatum: " Let her die, and I ' ll let you live. " A veterinarian trained to heal, Cassie can ' t let the woman die. But while she ' s examining the unconscious victim, the attacker steals her car. Now he has her name. Her address. And he knows about her children. Though they warn her to be careful, the police assure her that the perpetrator won ' t get near her. Cassie isn ' t so sure. The next day—Halloween—her husband disappears while trick-or-treating with their six-year-old daughter. Are these disturbing events a coincidence or the beginning of a horrifying nightmare? Her husband has been growing distant—is it possible he ' s become involved with another woman? Is Cassie ' s confrontation with the road-side attacker connected to her husband ' s disappearance? With these questions swirling in her mind Cassie can trust no one, maybe not even herself. The only thing she knows for sure is that she can ' t sit back while the people she loves are in danger. As she desperately searches for answers, Cassie discovers that nothing is as random as it seems, and that she is more than willing to fight—to go to the most terrifying extremes—to save her family.
