It is clear that change and advancements, both systematic and scientific, are needed in a number of forensic science disciplines to ensure the reliability of work, establish enforceable standards, and promote best practices with the goals of improving public safety and enhancing the justice system. Only part of an explanation of these deficiencies can be given in this essay.

In the United States, some populations suffer from far greater disparities in health than others. Those disparities are caused not only by fundamental differences in health status across segments of the population, but also by systematic and social factors that contribute to, or result from, inequities in health status. Some of these factors are related to the built environment, policies, and norms that shape lives. When these factors are not optimal in a community, it does not mean that the community is not trying or taking a holistic approach to public health. When it is not optimal for a community to address the root causes of health inequities, such as unemployment, poor education, inadequate housing, poor public transportation, interpersonal violence, and lack of healthy food options, the community is suffering from a lack of resources. Inequities between marginalized groups and communities can also lead to poor health outcomes, including higher rates of chronic diseases and premature death.

The majesty and greatness of cities America is an urban nation, yet cities get a bad rap: they're dirty, poor, unhealthy, environmentally unfriendly. . . . or are they? In this revelatory book, Lying about Cities: Why the 'War on Poverty' is a Failure and What America Needs to Do About It, urban economist Edward L. Glaeser makes a bold claim, arguing that cities are not the root cause of poverty and inequality. Instead, Glaeser argues that cities are often the solution to these problems, with their diversity, innovation, and energy. Using data and analysis, Glaeser shows how cities have the potential to be engines of growth and prosperity, but only if they are not constrained by policies and norms that limit their potential. For cities to truly thrive, they need to be free to experiment and adapt, which means adjusting how they are governed and how they are financed.
