Information and communication technologies are advancing fast. Processing speed is still increasing at a high rate, followed by advances in digital storage technology, which double storage capacity every year. Furthermore, communication technologies do not lag behind. The Internet has been widely used, as well as wireless technologies. With a few mouse clicks, people can communicate with each other around the world. All these advances have great potential to change the way people live, introducing new concepts like ubiquitous computing and ambient intelligence. Technology is becoming present everywhere in the form of smart and sensitive computing devices. They are nonintrusive, transparent and hidden in the background, but they collect, process, and share all kinds of information, including user behavior, in order to act in an intelligent and adaptive way. These emerging technologies put new requirements on security and data management. As data are accessible anytime anywhere, it becomes much easier to get unauthorized data access. Furthermore, the use of new technologies has brought about some privacy concerns. It becomes simpler to collect, store, and search personal information, thereby endangering people's privacy. Therefore, research in secure data management is gaining importance, attracting the attention of both the data management and the security research communities. The interesting problems range from traditional topics, such as, access control and general

database security, via privacy protection to new research directions, such as cryptographically enforced access control.

E-Business covers a broad spectrum of businesses based on the Internet, including e-commerce, e-healthcare, e-government and e

tailoring. While substantial attention is being given to the planning and development of e-business applications, the efficiency and effectiveness of e-business systems will largely depend on management solutions. These management solutions demand a good grasp of both the technical and business perspectives of an e-business service. There have been many books on the Internet based on e-commerce, Internet protocols, distributed components etc. However, none of these books address the problem of managing e business as a set of networked services. They do not link enterprise management with network and systems management. This book provides an overview of the emerging techniques for IT service management from a business perspective with case studies from telecommunication and healthcare sectors. It integrates the business perspective with relevant technical standards, such as SNMP, WBEM and DMI. This book presents some concepts and methodologies that enable the development of effective and efficient management systems for networked services. The book is intended to familiarize practicing managers, engineers, and graduate level students with networked service management concepts, architectures and methodologies with reference to evolving standards. It should be useful in a number of disciplines, such as business management, information systems, computers and networking, and telecommunications. Appendix 2 is based on TeleManagement (TM) Forum's documents on TOM (GB921, GB910 and GB908). While this appendix has explained the basic management concept of an e-telco, TMForum now recommends the use of eTOM as explained in www.tmforum.com. An overview of eTOM is available in the report The TeleManagement Forum's enhanced Telecom Operations Map (eTOM) by Michael Kelly appearing in the Journal of Network and Systems Management in March 2003.

"A valuable, practical guide for navigating through ICT turbulence and dynamics. A lighthouse for the human side of ICT." Erik van de Loo, Director Executive Masters in Change, INSEAD Professor of Organisational Behaviour, INSEAD Business School "The ICT Malaise is a different and thorough point of view on the dysfunctional approach the world has taken to information and technology. In an era of exponential changes where humans are rendered obsolete at the same pace of technology, it is fundamental to go back to basics on why we lead and innovate in the first place." Silvio Rugolo, VP, Global Sales, BMC Software, Digital Service Operations We hurtle ahead with technology, apps, and the newest innovation in a world that already demands a constant online presence and availability. You are included if you quickly adapt the newest technology and excluded if you wait too long. Information and communication technology (ICT) service providers, suppliers, and customers all try to make sense and make the most money out of technology developments and constant innovation with the help of frameworks, methodologies, best-practice approaches, and models. They continuously improve, align, integrate, and optimize, but unfortunately do not apply the same drive to safeguarding quality. This book leads the reader along a path of critical thinking, reflecting, and contemplating while offering alternative ways for service providers, customers, and suppliers to interact with each other. In addition, it encourages them to

conduct their business in such a way that customers, service providers, and suppliers achieve satisfaction. The author implies a different mindset, a new way of interacting and a surprising approach to the many frameworks, models, and methodologies being introduced ceaselessly. While reading this book, IT professionals receive practical guidelines for using these newfound methodologies and models to help build and maintain healthy business relations while ensuring quality delivery of products and services. Readers will be surprised by how much more satisfying and less stressful their work environment becomes!
