[Merchants of Labour](#) Organization for Economic Co-Operation & Development
Migration for work is an important livelihood option for many households in Tajikistan due to limited job opportunities. Remittances from migrant workers significantly supplement the country's foreign currency reserves, but the economic crisis and worldwide shutdown induced by the coronavirus disease (COVID-19) have caused international migration flows to fall, and remittances are projected to decline significantly. This publication reviews the state of international migration out of Tajikistan and identifies the impact of COVID-19 on the movement of people and migrant workers, in particular. It also reviews international best practices and proposes appropriate predeparture programs, post-return services for Tajik migrants, and ways to address migrate worker issues related to the pandemic.

This publication addresses the role of the biomedical engineer in the development, regulation, management, training, and use of medical devices. The first part of the book looks at the biomedical engineering profession globally as part of the health workforce: global numbers and statistics, professional classification, general education and training, professional associations, and the certification process. The second part addresses all of the different roles that the biomedical engineer can have in the life cycle of the technology, from research and development, and innovation, mainly undertaken in academia; the regulation of devices entering the market; and the assessment or evaluation in selecting and prioritizing medical devices (usually at national level); to the role they play in the management of devices from selection and procurement to safe use in healthcare facilities. The annexes present comprehensive information on academic programs, professional societies, and relevant WHO

and UN documents related to human resources for health as well as the reclassification proposal for ILO. This publication can be used to encourage the availability, recognition, and increased participation of biomedical engineers as part of the health workforce, particularly following the recent adoption of the recommendations of the UN High-Level Commission on Health Employment and Economic Growth, the WHO Global Strategy on Human Resources for Health, and the establishment of national health workforce accounts. The document also supports the aim of reclassification of the role of the biomedical engineer as a specific engineer that supports the development, access, and use of medical devices within the national, regional, and global occupation classification system.

In the wake of the terrorist attacks on September 11, 2011, discussions on ties between Islamic religious education institutions, namely madrassahs, and transnational terrorist groups have featured prominently in the Western media. In the frenzied coverage of events, however, vital questions have been overlooked: What do we know about the madrassahs? Should Western policymakers be alarmed by the recent increase in the number of these institutions in Muslim countries? Is there any connection between them and the "global jihad"? Ali Riaz responds to these questions through an in-depth examination of the madraassahs in Pakistan, Bangladesh, and India. In Faithful Education, he examines these institutions and their roles in relation to current international politics.

Skilling the Workforce Rutgers University Press

More workers are crossing national borders to look for jobs than ever before. Many migrants seek overseas employment with the help of agents or intermediaries. These "merchants of labour" include relatives who finance a migrant's trip, provide housing and arrange for a job abroad; public employment services; and private recruitment agencies. They also comprise an insalubrious underworld of smugglers and traffickers. The agents who recruit and deploy migrant workers are at the heart of the evolving migration infrastructure, i.e. the network of business and personal ties that is creating a global labour market. This book highlights best practices in the activities and regulation of these merchants of labour as well as innovative strategies to protect migrant workers, underlining the contribution of ILO standards. It covers a broad range of national and regional experiences and puts "merchants of labour" in the wider context of changing employment relationships in globalizing labour markets. The papers it contains are an important contribution to understanding a major mechanism facilitating the growth of the migrant labour force.

Human resources for medical devices - the role of biomedical engineers Academic Press

This joint OECD-ILO publication provides guidance on how local and regional governments can foster business-education partnerships in apprenticeship programmes and other types of work-based learning, drawing on case studies across nine countries. There has been increasing interest in apprenticeships which combine on the job training with classroom-based study, providing a smooth transition from school to work. There are benefits to both individuals and employers from participating in apprenticeships, including increased productivity and job quality. Successful implementation is contingent on having a high level of employer engagement at the local level, notably in the design, development and delivery of programmes.
