Master's Thesis from the year 2004 in the subject Business economics - Marketing, Corporate Communication, CRM, Market Research, Social Media, grade: A (1.0), Hawai'i Pacific University, course: Professional Paper MBA, 20 entries in the bibliography, language: English, abstract: " Building a brand is both an art and a science. It is the strategic mix of focus and risk that gives a brand its meaning in people ' s lives (Dolan, 2003) ". Branding has been around for centuries as a means to distinguish the goods of one producer from those of another. Brand elements identify and differentiate the brand. However, many practicing managers refer to a brand as more than

---

that. They define a brand in terms of having actually created a certain amount of awareness and reputation in the marketplace, which distinguishes a small brand from a big brand. Especially strong brands have a number of different types of intangible image associations that link customers emotionally to the brand. Prior research has explored differences in customer perception and evaluation of brands for example through investigating brand equity. More recent research has found out that customers differ not only in their perception of brands but also in how they relate to brands. This suggests that people sometimes even form a relationship with a specific brand (Aggarwal, 2004). Branding and brand-based differentiation are powerful means for creating and sustaining competitive advantage (Aggarwal, 2004). Highly competitive markets like the automotive market make powerful, strong brands essential to accomplishing growth. According to Agarwal, Dahlhoff & Rao (2004), companies create brand equity by delivering quality products and by creating strong, unique and favorable brand associations. Customer loyalty, larger margins, brand extension opportunities, enhanced perceptions of product performance, and increased marketing effectiveness and efficiency among other things are possible benefits of building up brand equity. This research paper will look at the brand BMW. BMW, which stands for “ Bayerische Motoren Werke ”, is a major European manufacturer of luxury cars. The headquarters of the multinational corporation BMW Group is in Munich, Germany. The company has built substantial brand equity over the years through the continuous branding efforts for high quality products. The luxury car category includes both traditional and functional luxury cars. U.S. manufacturers mainly produce traditional luxury cars, while

functional luxury cars are represented primarily by European manufacturers such as BMW (Bernhardt & Kinnear, 1994).

An analysis of the ways that software creates new spatialities in everyday life, from supermarket checkout lines to airline flight paths. After little more than half a century since its initial development, computer code is extensively and intimately woven into the fabric of our everyday lives. From the digital alarm clock that wakes us to the air traffic control system that guides our plane in for a landing, software

is shaping our world: it creates new ways of undertaking tasks, speeds up and automates existing practices, transforms social and economic relations, and offers new forms of cultural activity, personal empowerment, and modes of play. In *Code/Space*, Rob Kitchin and Martin Dodge examine software from a spatial perspective, analyzing the dyadic relationship of software and space. The production of space, they argue, is increasingly dependent on code, and code is written to produce space. Examples of code/space include airport check-in areas, networked offices, and cafés that are transformed into workspaces by laptops and wireless access. Kitchin and Dodge argue that software, through its ability to do work in the world, transduces space. Then Kitchin and Dodge develop a set of conceptual tools for identifying and understanding the interrelationship of software, space, and everyday life, and illustrate their arguments with rich empirical material. And, finally, they issue a manifesto, calling for critical scholarship into the production and workings of code rather than simply the technologies it enables—a new kind of social science

focused on explaining the social, economic, and spatial contours of software.

The ultimate insider look at the newest titans of tech—and what you can learn from their success In 2007, twenty-one-year old David Karp launched Tumblr, a simple micro-blogging platform, on a whim. By 2012, it had become one of the top ten online destinations, drawing 170 million visitors. By 2013, Yahoo had acquired Tumblr for over \$1 billion. Just like that, a kid who hadn't even earned his high school diploma was worth over a quarter billion dollars. And he's not the only one . . . Silicon Valley's newest billionaires represent a unique and unconventional breed of entrepreneur: young, bold, and taking the world by storm with their extreme speed, insatiable hunger, and progressive leadership. These whiz kids (and, to be fair, a few adults) have the hottest companies in the world. They are all turning just one brilliant insight or hook into money at a rate never before seen in human history—creating companies that, even with no revenue, garner insane valuations. With unique insider access to the

world's most influential and wealthy entrepreneurs, Forbes has dug in to find what these super-entrepreneurs say about their own success. This book, introduced, edited, and updated by Forbes editor Randall Lane, is the first comprehensive look at who these instant tech billionaires are and how they achieved their quick wins. With sixteen illuminating pieces, including two never-before published features, we get behind-the-scenes examinations of the founders of Spotify, Airbnb, Tumblr, Twitter, and more, including: Elon Musk: The billionaire founder of Paypal, electric carmaker Tesla, and private space company SpaceX. His extreme ambition is matched by his preternatural engineering mind; no wonder he was the model for Robert Downey Jr.'s portrayal of Iron Man. Evan Spiegel: The twenty-three-year old declined a \$3 billion cash offer from Mark Zuckerberg, after making the mountain come to Mohammed (Snapchat's HQ is in Los Angeles) —an unheard of request from a young gun to one of the biggest players in Silicon Valley. The story of Snapchat's origin is even wilder than Facebook's, but Spiegel's ability to parlay infamy and popularity into revenue is still up in the air, even as Snapchat's valuation continues to grow. Alex Karp: An eccentric philosopher with almost no tech background turned a Peter Thiel backed venture, Palantir, into a data-mining champion, with clients like the NSA, the FBI, and the CIA. Amid heated privacy concerns, Karp continues to grow Palantir like crazy, to \$196 million in funding and an estimated \$1 billion in contracts in 2014. You Only Have to Be Right Once is the definitive collection

**The Third Industrial Revolution** Lulu.com

The Industrial Revolution, powered by oil and other fossil fuels, is spiraling into a dangerous endgame. The price of gas and food are climbing, unemployment remains high, the housing market has tanked, consumer and government debt is soaring, and the recovery is slowing. Facing the prospect of a second collapse of the global economy, humanity is desperate for a sustainable economic game plan to take us into the future. Here, Jeremy Rifkin explores how Internet technology and renewable energy are merging to create a powerful "Third Industrial Revolution." He asks us to imagine hundreds of millions of people producing their own green energy in their homes, offices, and factories, and sharing it with each other in an "energy internet," just like we now create and share information online. Rifkin describes how the five-pillars of the Third Industrial Revolution will create thousands of businesses, millions of jobs, and usher in a fundamental reordering of human relationships, from hierarchical to lateral power, that will impact the way we conduct commerce, govern society, educate our children, and engage in civic life. Rifkin's vision is already

gaining traction in the international community. The European Union Parliament has issued a formal declaration calling for its implementation, and other nations in Asia, Africa, and the Americas, are quickly preparing their own initiatives for transitioning into the new economic paradigm. The Third Industrial Revolution is an insider's account of the next great economic era, including a look into the personalities and players – heads of state, global CEOs, social entrepreneurs, and NGOs – who are pioneering its implementation around the world.

The E36 was the embodiment of the luxury sports sedan, and the standard that other manufacturers strived to reach. And as such, the BMW 3 Series became wildly popular with BMW manufacturing 2.67 million E36 cars worldwide from 1992 to 1999. The new E36 featured a more aerodynamic design, potent dual overhead cam engine, multilink rear suspension, and a more luxurious interior than its predecessor. The E36 BMW seamlessly blended exhilarating performance with refined appointments and produced a comfortable yet aggressive driving machine that appealed to a wide audience. Although the stock BMW is a more-than-capable sports

sedan, veteran author Jeffrey Zurschmeide delves into all the different methods for extracting more performance, so you can make your E36 even more potent. He explains how to upgrade handling and control through installation of aftermarket coil-over springs, bushings, sway bars, and larger brakes. Producing more power is also a priority, so he shows you how to install and set up a cold-air intake, ignition tuners, and exhaust system components. You are also guided through work on cylinder heads, cams, and pistons. In addition, you're shown the right way to install superchargers and turbo kits. If your 3 Series is making more power, then you need to get that power to the ground; guidance is provided for upgrading the transmission and limited-slip differentials. The BMW 3 Series has set the benchmark for performance and luxury. But even at this benchmark, these cars can be dramatically improved. Each major component group of the car can be modified or upgraded for more performance, so you can build a better car that's balanced and refined. If you want to make your E36 a quicker, better handling, and more capable driving machine, this book is your indispensable guide for

making it a reality.

In this completely revised and updated edition of the customer service classic, Carl Sewell enhances his time-tested advice with fresh ideas and new examples and explains how the groundbreaking "Ten Commandments of Customer Service" apply to today's world. Drawing on his incredible success in transforming his Dallas Cadillac dealership into the second largest in America, Carl Sewell revealed the secret of getting customers to return again and again in the original Customers for Life. A lively, down-to-earth narrative, it set the standard for customer service excellence and became a perennial bestseller. Building on that solid foundation, this expanded edition features five completely new chapters, as well as significant additions to the original material, based on the lessons Sewell has learned over the last ten years. Sewell focuses on the expectations and demands of contemporary consumers and employees, showing that businesses can remain committed to quality service in the fast-paced new millennium by sticking to his time-proven approach: Figure out what customers want and make sure they get it. His "Ten Commandants" provide the essential guidelines, including:

- Underpromise, overdeliver: Never disappoint your customers by charging them more than they

planned. Always beat your estimate or throw in an extra service free of charge. • No complaints? Something's wrong: If you never ask your customers what else they want, how are you going to give it to them? • Measure everything: Telling your employees to do their best won't work if you don't know how they can improve.
