Battery Management Systems -

Design by Modelling describes the design of Battery Management Systems (BMS) with the aid of simulation methods. The basic tasks of BMS are to ensure optimum use of the energy stored in the battery (pack) that powers a portable device and to prevent damage inflicted on the battery (pack). This becomes increasingly important due to the larger power consumption associated with added features to portable devices on the one hand and the demand for longer run times on the other hand. In addition to explaining the general principles of BMS tasks such as charging algorithms and State-of-Charge (SoC) indication methods, the book also covers real-life examples of BMS functionality of practical portable devices such as shavers and cellular phones. Simulations offer the advantage over measurements that less time is needed to gain knowledge of a battery's behaviour in interaction with other parts in a portable device under a wide variety of conditions. This knowledge can be used to improve the design of a BMS, even before a prototype of the portable device has been built. The battery is the central part of a BMS and good simulation models that can be used to improve the BMS design were previously unavailable. Therefore, a large part of the book is devoted to the construction of simulation models for rechargeable batteries. With the aid of several

illustrations it is shown that design improvements can indeed be realized with the presented battery models. Examples include an improved charging algorithm that was elaborated in simulations and verified in practice and a new SoC indication system that was developed showing promising results. The contents of Battery Management Systems - Design by Modelling is based on years of research performed at the Philips Research Laboratories. The combination of basic and detailed descriptions of battery behaviour both in chemical and electrical terms makes this book truly multidisciplinary. It can therefore be read both by people with an (electro)chemical and an electrical engineering background.

For over 25 years Rob Siegel has written a monthly column called "The Hack Mechanic" for the BMW Car Club of America's magazine

Roundel. In *Memoirs of a Hack Mechanic*, Rob Siegel shares his secrets to buying, fixing, and driving cool cars without risking the kids' tuition money or destroying his marriage. And that's something to brag about considering the dozens of cars, including twenty-five BMW 2002s, that have passed through his garage over the past three decades. With a steady dose of irreverent humor, *Memoirs of a Hack Mechanic* blends car stories, DIY advice, and cautionary tales in a way that will resonate with the car-obsessed (and the people who love them).

The Community Arts Center Handbook is a collection of illustrated methods to aid arts organizations at various stages of the planning and design process. Setting up a new arts council or improving an existing requires a visioning process that offers community participants opportunities to make their arts concerns known, as well as planned actions to achieve desired outcomes. The effectiveness of an organization depends upon a relationship to its constituents, who may be actual members or the broader

public. The transparency of the councils' goals can influence the way that media is used to keep the community informed. Consequently, a well-planned communications program delivers information translated into the language of the audience. Assessing community assets through workshops and surveys of arts activities provides the basis for identifying facility space requirements-and such requirements determine the suitability of existing facilities for use as an arts center. Arts groups sometimes embark on a building program without knowing where to begin and who should be involved. It is also evident that each arts group differs in its organization, scope and community support, yet most are similar in their lack of funds and dispersal of activities and locations. Arts groups using this guide will find that they will become better informed about planning, design and management and are better positioned to identify appropriate professionals to implement their ideas. The illustrations in this book represent Henry Sanoff's involvement in projects in Australia, Japan and the United States. Other contributors include Graham Adams, Kofi Boone, Lucy Davis, Matt Devine, Marilia Do-Val, Neil Goldberg, Jeffrey Levine, Ann McAllum, Evrim Demir

Mishchenko, Rory O'Moore, Sergio Ortiz, Ryoko Sato, and Nadya Snigiryova, Additional support came from an earlier grant (1982-1983) from the National Endowment of the Arts Design Arts Program and the North Carolina Arts Council for the publication of an Arts Center Workbook.
