BMW Z4: Design, Development and Production is the story of the creation of the Z4 from the first concept in the summer of 1998 until the delivery of customer cars in October 2002. David Lightfoot had exclusive access to the designers, engineers, and production personnel involved in the Z4, and provides an exciting behind-the-scenes look into the process. Never before has the story been told of how BMW brings together creative people and world renowned technical resources to deliver dream machines to its devoted clientele. David Lightfoot is a BMW enthusiast of the first order. He writes for Roundel, the publication of the BMW Car Club of America, on topics ranging from BMW history to future products and development. A particular interest is high performance driving; he has been an instructor with his local BMW Club for more than 20 years. The irony of his driving style and his last name have been brought to his attention many times. He is a lifelong resident of Seattle, Washington. This is his first book.

The light-duty vehicle fleet is expected to undergo substantial technological changes over the next several decades. New powertrain designs, alternative fuels, advanced materials and significant changes to the vehicle body are being driven by increasingly stringent fuel economy and greenhouse gas emission standards. By the end of the next decade, cars and light-duty trucks will be more fuel efficient, weigh less, emit less air pollutants, have more safety features, and will be more expensive to purchase relative to current vehicles. Though the gasoline-powered spark ignition engine will continue to be the dominant powertrain configuration even through 2030, such vehicles will be equipped with advanced technologies, materials, electronics and controls, and aerodynamics. And by 2030, the deployment of alternative methods to propel and fuel vehicles and alternative modes of transportation, including autonomous vehicles, will be well underway. What are these new technologies - how will they work, and will some technologies be more effective than others? Written to inform The United States Department of Transportation's National Highway Traffic Safety Administration (NHTSA) and Environmental Protection Agency (EPA) Corporate Average Fuel Economy (CAFE) and greenhouse gas (GHG) emission standards, this new report from the National Research Council is a technical evaluation of costs, benefits, and implementation issues of fuel reduction technologies for next-generation light-duty vehicles. Cost, Effectiveness, and Deployment of Fuel Economy Technologies for Light-Duty Vehicles estimates the cost, potential efficiency improvements, and barriers to commercial deployment of technologies that might be employed from 2020 to 2030. This report describes these promising technologies and makes recommendations for their inclusion on the list of technologies applicable for the 2017-2025 CAFE

standards.
