For more than half a century, marketers have bombarded customers with more and more choices in products and services. What is the result? Unprecedented anxiety. Our mental circuit breakers are on overload. In fact, pioneering brand strategists Steven M. Cristol and Peter Sealey assert that we have reached our manageable threshold for making decisions -- and a watershed in product proliferation. In this pathbreaking book, the authors argue with compelling evidence that the next generation of marketing successes will belong to those brands that simplify customers' lives or businesses in ways that are inextricably tied to brand and product positioning. They contend that if a brand is not reducing customer stress, it is creating it -- and it is vulnerable to losing market share to more customer-empathetic competitors. Writing especially for product or brand managers who are struggling to simplify their portfolios, Cristol and Sealey have created a breakthrough framework that is itself a lesson in simplicity. After presenting two essential guideposts for managers to assess where their brand sits on the stress spectrum, the authors turn to the heart of Simplicity Marketing -- the 4 R's of simplification: Replace, Repackage, Reposition, and Replenish. Using scores of real-world company examples, Cristol and Sealey show how each of the 4 R's interacts with the others in powerful ways to relieve customer stress and how these strategies may be executed individually or in combination to build brand loyalty. Here for the first time are ten specific strategies to relieve customer stress through consolidating, aggregating, or integrating products and services, repositioning brands for more relevance to stress reduction, and decluttering customers' decision-making requirements. The final pages of this brilliant manifesto for a simplicity revolution provide a guide to managing simplicity strategies, leveraging information technology to simplify rather than complicate customers' lives, and integrating all the tools in the book into an executorial blueprint.

Diagnostics, or fault finding, is a fundamental part of an automotive technician's work, and as automotive systems become increasingly complex there is a greater need for good diagnostic skills. Advanced Automotive Fault Diagnosis is the only book to treat automotive diagnostics as a science rather than a check-list procedure. Each chapter includes basic principles and examples of a vehicle system followed by the appropriate diagnostic techniques, complete with useful diagrams, flow charts, case studies and self-assessment questions. The book will help new students develop diagnostic skills and help experienced technicians improve even further. This new edition is fully updated to the latest technological developments. Two new chapters have been added – On-board diagnostics and Oscilloscope diagnostics – and the coverage has been matched to the latest curricula of motor vehicle qualifications, including: IMI and C&G Technical Certificates and NVQs; Level 4 diagnostic units; BTEC National and Higher National qualifications from Edexcel; International Motor Vehicle qualifications such as C&G 3905; and ASE certification in the USA.
