Most boats do not
have a dedicated
fresh air inlet port
for the engine air so
it is a mystery how
the engine breaths at
all. This means the
engine bay will be at
a lower pressure
than the rest of the
boat and air will be
being drawn in
through cracks and
holes for as long as
the engine runs.

systems
In the old days, many
marine engine cooling
systems were of the
“ raw-water ”
variety, meaning
simply that they relied
on pumping whatever
water the boat was
floating in through the
engine and pumping it
out the exhaust
system—salt water,
polluted water, algae-
infested water,

whatever was available.
