service departments when getting a vehicle repaired but what happens when that vehicle is a boat? Those encounters are harrowing and even if you're only boating on a seasonal basis, they occur frequently. From general boat repairs, annual winterizing service, dry docking, and springtime tune-ups, it may seem like the bills never end. Michael Bivona, a certified public accountant, helps you navigate being a boat owner in this guide to saving money. He's saved more than \$150,000 in repairs and maintenance over his forty-plus years of boating and has avoided many unhappy breakdowns. Whether you do maintenance and repairs yourself or go to a professional, he shares money-saving tips, including: Unless there is extensive damage to your boat, always insist on a written estimate. Never tell a service department to do whatever is necessary to fix your boat. Always carefully inspect your boat if someone else has made repairs. With a bit of training and hands-on experience, you can also enjoy boating without draining your life savings.

Systems Analysis and Simulation in Ecology, Volume II, concludes the original concept for Systems

Analysis and Simulation in Ecology, and at the same time initiates a continuing series under the same title.

The original idea, in 1968, was to draw together a collection of systems ecology articles as a convenient benchmark to the state of this emerging new field and as a stimulus to broader interest. These purposes will continue to motivate the series in highlighting, from time to time, accomplishments, trends, and prospects. The present volume is organized into four parts. Part I outlines for ecologists the concepts upon which systems science as a discipline is built. Part II presents example applications of systems analysis methods to ecosystems. Part III is devoted to new theory, including an investigation into the feasibility of several nonlinear formulations for use in compartment modeling of ecosystems; and the important topic of connectivity in systems. Part IV presents a sampling of systems ecology applications. It provides a reasonably balanced and accurate picture of the practical capability of ecological systems analysis and simulation. Performance does not come up to publicity, but prospects for rapid improvement are good given a willingness to let pragmatism guide sound scientific development without demanding unrealistic short-term successes.

Report of the Federal Trade Commission on Distribution Methods and Costs: Cost of production and distribution of fish in New England

AILC is an annual case law reporter that provides the full text of U.S. court opinions involving international law issues. The courts covered include all U.S.

federal district courts, federal appellate courts, and the U.S. Supreme Court, as well as some state courts, the U.S. Court of Claims, the U.S. Court of International Trade, and the U.S. Tax Court. The series seeks to provide not every single case in which a court refers to international law but rather all cases that analyze at least one international law issue in depth. The list of subjects addressed by these volumes is vast and changes from year to year, with the inclusion and prominence of most topics turning on their prevalence in a given year's jurisprudence. Some consistently prominent topics are personal jurisdiction over foreign defendants, deportation procedure, and double taxation. Over the last three editions (2006, 2007, and 2008), many topics have developed rapidly and constitute a correspondingly larger portion of the volumes, particularly Terrorism, the Foreign Sovereign Immunities Act, Forum Non Conveniens, and an entirely new, added topic: the National Security Exception (to deportation eligibility). The 2008 edition of AILC also features expanded sections on family law and on the detention of terrorist suspects. The U.S. war on terror and the crisis at Guantanamo have made that last topic a significant and dynamic component of AILC. Each edition of AILC also comes framed with two practical resources for students and scholars. The first is an introductory editor's note that both reviews international law's major developments for the given year and explains to readers how to use the volumes. The second is a subject index to allow for targeted research. Volume Two of AILC consists of cases concerning territories, trusteeships, boundaries and navigable waters, covering marine torts and crimes and death on the high seas by wrongful act. Also covered are procedural aspects, including in personam jurisdiction, extraterritoriality, and forum selection clauses. In *Atlantic Sounding Co., Inc. v. Edgar L. Townsend*, the issue was whether an injured seaman may recover punitive damages for his employer's willful failure to pay maintenance and cure. The court ruled that punitive damages were available as a matter of general maritime law. The issue in *Jose Marcial Reyes-Fuentes, et al., v. Shannon Produce Farm, Inc., et al.* was whether the Fair Labor Standards Act's (FLSA) provision provides a cause of action to foreign workers located abroad who are denied re-hire in retaliation for exercising their rights under the FLSA. The court ruled that neither the FLSA nor general extraterritoriality principles stand in the way of the plaintiffs' retaliation claim.

Nigel Calder, a diesel mechanic for more than 25 years, is also a boatbuilder, cabinetmaker, and machinist. He and his wife built their own cruising sailboat, *Nada*, a project they completed in 1984. Calder is author of numerous articles for *Yachting Monthly* and many other magazines worldwide, as well as the bestselling *Boatowner's Practical and Technical Cruising Manual* and *Boatowner's Mechanical and Electrical Manual*, both published by Adlard Coles Nautical. Here, in this goldmine of a book, is everything the reader needs to keep their diesel engine running cleanly and efficiently. It explains how diesel engines work, defines new terms, and lifts the veil of

mystery that surrounds such engines. Clear and logical, this extensively illustrated guide will enable the reader to be their own diesel mechanic. As Nigel Calder says: 'there is no reason for a boatowner not to have a troublefree relationship with a diesel engine. All one needs is to set the engine up correctly in the first place, to pay attention to routine maintenance, to have the knowledge to spot early warning signs of impending trouble, and to have the ability to correct small ones before they become large ones.'

The aim of this book, with its superb step by step photographs and detailed diagrams is to enable every owner to understand the workings of an outboard motor (2 or 4 stroke) and be able to fix it with relative ease. It includes: an explanation of the different parts that make up the engine and how they interact; how fuel is transformed into propulsion; regular maintenance and repair worksheets to help even the most mechanically ignorant to work on their outboard engine with confidence; the most common causes of breakdown; troubleshooting tables to allow you to diagnose and fix the most common engine problems and advice on how to winterize your outboard in one short afternoon. After reading this book, your outboard will no longer be a potential bother to you but an ally for better boating.
