The female reproductive system is a particularly fascinating study in the way body systems work together to ensure our survival. Throughout the course of a woman's menstrual cycle, her body uses four different hormones – most of which are produced by her ovaries – to decide when and whether her body should prepare for pregnancy.

## Hamilton 7th Grade Science

Thus, the heart is an organ composed of all four tissues, whose function is to pump blood throughout the body. Of course, the heart does not function in isolation; it is part of a system composed of blood and blood vessels as well. The highest level of body organization, then, is that of the organ system.
