[human body | Description, Anatomy, & Facts | Britannica](#)

Our muscular system has four main functions: movement of our body, movement of substances through the body, posture and body position, and generation of body heat. Without our muscles, we would not be able to move around.

But smooth muscles are at work all over your body. In your stomach and digestive system, they contract (tighten up) and relax to allow food to make its journey through the body.

Your smooth muscles come in handy if you're sick and you need to throw up.
