The Lore of Flight Zenith Press
From the early machines to today's sophisticated aircraft, stability and control have always been crucial considerations. In this second edition, Abzug and Larrabee again forge through the history of aviation technologies to present an informal history of the personalities and the events, the art and the science of airplane stability and control. The book includes never-before-available impressions of those active in the field, from pre-Wright brothers airplane and glider builders through to contemporary aircraft designers. Arranged thematically, the book deals with early

developments, research centers, the effects of power on stability and control, the discovery of inertial coupling, the challenge of stealth aerodynamics, a look toward the future, and much more. It is profusely illustrated with photographs and figures, and includes brief biographies of noted stability and control figures along with a core bibliography. Professionals, students, and aviation enthusiasts alike will appreciate this readable history of airplane stability and control.

Procurers and contractors increasingly need practical guidance for the strategic procurement of building services. Clients seeking to improve the delivery performance of the construction industry are increasingly using alternative procurement arrangements. These modern arrangements attempt to deliver a more strategic approach to achieving value for money. Yet little thought is ever given to the strategic importance of building services. No other single aspect of a project will affect project success more than the timely delivery of a fully functioning services installation. Beyond the normal considerations of time, cost and quality, building services have a series of unique requirements not normally considered. For the first time these unique requirements are combined in a single text, providing the reader with the definitive guide to building services procurement. The text reviews each of the major critical success factors and clearly explains the supporting processes that must be enacted to ensure success. It reviews the general nature of procurement systems and construction projects, and then explores the increasing importance that building services play both in the construction process and in determining success for the client. Each significant stage within the procurement process is explored by explaining its importance and showing what decisions need to be made to develop a cohesive strategy. It concludes by giving a step-by-step guide to clearly develop and implement a building services procurement strategy.

NASA Authorization for Fiscal Year 1969

When the Boeing 747 first flew commercially in 1970, it ushered in a new era of affordable air travel. Often referred to by the nickname “Jumbo Jet,” the 747 was the world’s first wide-body commercial airliner, and its advent has proved to be one of the major milestones in aviation history. The centerpiece of this Haynes Manual is the 747-400, which is the most numerous version. As well as being the bestselling model in the 747 family, there are more 400s currently in service than any other model of this

mighty jumbo.

The Road to the 707

This book outlines the critical engineering discoveries leading to the jet transport age - from observations of birds in flight to modern jet transports. Starting with the Wright Brothers, it traces a path to the Boeing XB-47 swept-wing jet bomber, ending with the first generation of commercial jet transports: the Comet, the Convair 990, the DC-8, and the 707. Chapters include: The Pioneers; Airmail and the Early Transports; The 247 Airliners; The DC-3 and the Four-Engine Transports; The Four-Engine Bombers; The War Years; The Turbo-Jet Engine; The GE TG-180 Jet Engine; The Boeing High-Speed Wind Tunnel; The Swept Wing; The Jet Bomber; The Dash-80 Prototype; The 707-DC-8 Competition; and The Fan Engine. A clearly-written and easy-to-read book that is a must-read for all aircraft enthusiasts. William H. Cook started working for Boeing Engineering in 1938. There he held many prominent positions, including Manager of High-speed Wind Tunnel Design; B-29 Assistant Project Engineer; XB-47 Aerodynamics Unit Chief; and Chief of Technical Staff, Transport Division. Cook retired in 1974, but his engineering expertise is still in use today.
