William Hough Cook
Built by Boeing Commercial
Airplanes, the 707 narrow
body jet airliner first flew in
1957 and entered revenue
service with Pan American
World Airways in 1958.

Versions of the aircraft have a capacity from 140 to 219 passengers and a range of 2,500 to 5,750 nautical miles. Developed as Boeing's first jet airliner, the 707 is a swept-wing design with podded engines. Although it was not the first jetliner in service, the 707 was the first to be commercially successful. Dominating passenger air transport in the 1960s and remaining common through the 1970s, the 707 is generally credited with ushering in the age of jet travel. It established

Boeing as one of the largest manufacturers of passenger aircraft and led to the later series of airliners with '7x7' designations. The later 720, 727, 737, and 757 share elements of the 707's fuselage design.

Boeing 747 Owners' Workshop Manual Simon and Schuster

This book outlines the critical engineering discoveries leading to the jet transport age - from observations of birds in flight to modern jet transports. Starting with the Wright Brothers, it traces a path to the Boeing XB-47 swept-wing jet bomber, ending with the first generation of commercial jet transports: the Comet, the Convair 990, the DC-8, and the 707. Chapters include: The Pioneers; Airmail and the Early Transports; The 247 Airliners; The DC-3 and the Four-Engine Transports; The Four-Engine Bombers; The War Years; The Turbo-Jet Engine; The GE TG-180 Jet

Engine; The Boeing High-Speed Wind Tunnel; The Swept Wing; The Jet Bomber; The Dash-80 Prototype; The 707-DC-8 Competition; and The Fan Engine. A clearly-written and easy-to-read book that is a must-read for all aircraft enthusiasts. William H. Cook started working for Boeing Engineering in 1938. There he held many prominent positions, including Manager of High-speed Wind Tunnel Design; B-29 Assistant Project Engineer; XB-47 Aerodynamics Unit Chief; and Chief of Technical Staff, Transport Division. Cook retired in 1974, but his engineering expertise is still in use today.

Amy's Uncle Al and her mother Ariel both seem to have insider knowledge that something terrible is going to happen in Manhattan on September 11, 2001. Thousands heeded Ariel's warning in The Chrislamic Messenger to flee New York City. But how did they know? The military believes Amy's father is somehow behind 9/11, even though he is

supposedly dead and buried. As a weapons technologist, he was custodian of two Mark 53 nuclear bombs that were jettisoned by a failing B-52 over Champlain Lake at the same time he went missing in 1978. Now, years later, he seems to have come back from the dead. Only Amy can stop her uncle from executing her father's plan to detonate one of the massive bombs inside a uranium mine in the Adirondacks, causing a cataclysmic chain reaction that would create a sixth Great Lake and precipitate evacuation of the Eastern seaboard. Uncle Al is intent on stopping Amy from alerting authorities, by supplying her Chrislamic mother with evidence that although Amy swears she is a

virgin, she and her cousin Ron have been indulging in "fornication." According to Sharia law and Deuteronomy 13, Amy must be stoned to death. As Uncle Al prepares to detonate the dirtiest bomb in history, Ron attempts to stop Amy's stoning before New York State blows sky high.
