The bestselling autobiography of Casey Stoner, Australia's two-time MotoGP Champion. 'If you never give up, anything can happen' - Casey Stoner Showing anything is possible when determination meets talent, two-time World MotoGP champion Casey Stoner shares his inspirational journey from Queensland toddler, with an extraordinary ability on a motorbike, to his decision to retire at twenty-seven with nothing left to prove. As fearless with his opinions as he is on the racetrack, Casey includes all the highs and lows of his life so far: the real reason he left for Europe so young, his thoughts on racing as it stands today, the riders' hierarchy, the politics of racing, the importance of family, his battle with illness and why he decided to turn his back on a multimillion-dollar contract when he was still winning. And he will let us in on some of the new goals he has set for himself. Pushing the Limits is a unique and remarkable account of self-sacrifice and determination to succeed against the odds, the inspiring story of a young Australian who took on the world on his terms, his way. . . and won.

This book, first appearing in German in 2004 under the title Spezielle Relativit tstheorie f r Studienanf nger, offers access to the special theory of relativity for readers with a background in mathematics and physics comparable to a high school honors degree. All mathematical and physical competence required beyond that level is gradually developed through the book, as more advanced topics are introduced. The full tensor formalism, however, is dispensed with as it would only be a burden for the problems to be dealt with. Eventually, a substantial and comprehensive treatise on special relativity emerges which, with its gray-shaded formulary, is an invaluable reference manual for students and scientists alike.Some crucial results are derived more than once with different approaches: the Lorentz transformation in one spatial direction three times, the Doppler formula four times, the Lorentz transformation in two directions twice; also twice the unification of electric and magnetic forces, the velocity addition formula, as well as the aberration formula. Beginners will be grateful to find several routes to the goal; moreover, for a theory like relativity, it is of fundamental importance to demonstrate that it is self-contained and without contradictions.Author's website: www.relativity.ch.

Economic Botany My First
The Book of Questions, of which volumes IV, V, VI are together published here, is a meditative narrative of Jewish Experience, and, more generally, man's relation to the world. In these volumes the word is personified in the woman Yael, silence in her still-born child Elya. Even though words imply ambiguity and lies, they are the home of the exile. A book becomes the Book, fragments of the law that are in some way unified, where past and present, the visionary, and the common place, encounter each other. For Jabes every word is a question in the book of being. Man defines himself in the world against all that threatens his existence- death, the infinite, silence, that is, God, his primal opponent. How can one speak what cannot be spoken?
