Pockets, Pull-Outs, and Hiding Places "O'Reilly Media, Inc." Learn the new Document Store feature of MySQL 8 and build applications around a mix of the best features from SQL and NoSQL database paradigms. Don't allow yourself to be forced into one paradigm or the other, but combine both approaches by using the Document Store. MySQL 8 was designed from the beginning to bridge the gap between NoSQL and SQL. Oracle recognizes that many solutions need the capabilities of both. More specifically, developers need to store objects as loose collections of schema-less documents, but those same developers also need the ability to run structured queries on their data. With MySQL 8, you can do both! Introducing the MySQL 8 Document Store presents new tools and features that make creating a hybrid database solution far easier than ever before. This book covers the vitally important MySQL Document Store, the new X Protocol for developing applications, and a new client shell called the MySQL Shell. Also covered are supporting technologies and concepts such as JSON, schema-less documents, and more. The book gives insight into how features work and how to apply them to get the most out of your MySQL experience. The book covers topics such as: The headline feature

Critical for converting XML documents, and extremely versatile, the XSLT language nevertheless has complexities that can be daunting. The XSLT Cookbook is a collection of hundreds of solutions to problems that Extensible Stylesheet Language Transformations (XSLT) developers regularly face. The recipes range from simple string-manipulation and mathematical processing to more complex topics like extending XSLT, testing and debugging XSLT stylesheets, and graphics creation with SVG.

Recipes can be run directly or tweaked to fit your particular application's needs more precisely. Each recipe walks through a problem and a solution, with explanations of the choices made and techniques used in creating that solution, and many recipes include alternate solutions and explore issues like convenience and performance. Topics covered include: String manipulation Mathematical processing Date and time handling Interactions between calendar systems Selecting content in source documents Efficient tree-manipulation Conversions from XML to plain text Tweaking XML documents with stylesheets Using XSLT to query XML documents Generating HTML with XSLT Creating charts and graphs with SVG and XSLT Generating C and XSLT code using XSLT Processing Visio documents in XSLT Working with XML Topic Maps (XTM) Using XSLT to create SOAP documentation from WSDL Extending XSLT with additional functions Embedding XSLT in other

processing Testing and debugging XSLT stylesheets Creating generic XSLT processors which work on many XML vocabularies The XSLT Cookbook provides an ideal companion both for developers still figuring out XSLT's template-based approach who want to learn by example, and for developers who know XSLT and want a collection of quickly reusable recipes. XSLT frequently offers a number of ways to perform a transformation, and the best solution may not always be the most straightforward. The recipes in this Cookbook demonstrate and explain XSLT's template-based logic, a frequent stumbling block for developers new to XSLT. Among the variety of XSLT books now available, none has the explicit solution-oriented approach of this Cookbook.

The International Symposium on Distributed Computing and Artificial Intelligence is an annual forum that brings together ideas, projects, lessons, etc. associated with distr- uted computing, artificial intelligence and its

applications in different themes. This meeting has been held at the University of Salamanca from the 22th to the 24th of October 2008. This symposium has be organized by the Biomedicine, Intelligent S- tem and Educational Technology Research Group (http://bisite. usal. es/) of the Univ- sity of Salamanca. The technology transfer in this field is still a challenge and for that reason this type of contributions has been specially considered in this edition. This c- ference is the forum in which to present application of innovative techniques to complex problems. The artificial intelligence is changing our society. Its application in distr- uted environments, such as the Internet, electronic commerce, mobile communications, wireless devices, distributed computing, and so on is increasing and is becoming an element of high added value and economic potential, both industrial and research. These technologies are changing constantly as a result of the large research and technical effort being undertaken in both universities and businesses. The exchange of ideas between scientists and technicians from both academic and business areas is essential to facilitate the development of systems that meet the demands of today's society.

A Step-By-Step Guide to Designing and Typesetting Your Own Book Using Adobe Indesign WRITERS REPUBLIC LLC
We introduce a lazy XSLT interpreter that provides random access to the transformation result. This allows efficient pipelining of transformation sequences. Nodes of the result tree are computed only upon initial access. As these computations have limited fan-in, sparse output coverage propagates backwards through the pipeline. In comparative measurements with traditional eager implementations, our approach is on par for complete coverage and excels as coverage becomes sparser. In contrast to eager evaluation, lazy evaluation also admits infinite intermediate results, thus extending the design space for transformation sequences. To demonstrate that lazy evaluation preserves the semantics of XSLT, we reduce XSLT to the lambda calculus via a functional language. While this is possible for all languages, most imperative languages cannot profit from the confluence of lambda as only one reduction applies at a time.

This book constitutes the refereed proceedings of the 10th International Conference on Parallel Problem Solving from Nature, PPSN 2008, held in Dortmund, Germany, in September 2008. The 114 revised full papers presented were carefully reviewed and selected from 206 submissions. The conference covers a wide range of topics, such as evolutionary computation, quantum computation, molecular computation, neural computation, artificial life, swarm intelligence, artificial ant systems, artificial immune systems, self-organizing systems, emergent behaviors, and applications to real-world problems. The paper are organized in topical sections on formal theory, new techniques, experimental analysis, multiobjective optimization, hybrid methods, and applications.
