The goal of this book is to teach you to think like a computer scientist. This way of thinking combines some of the best features of mathematics, engineering, and natural science. Like mathematicians, computer scientists use formal languages to denote ideas (specifically computations). Like engineers, they design things, assembling components into systems and evaluating tradeoffs among alternatives. Like scientists, they observe the behavior of complex systems, form hypotheses, and test

predictions. The single most important skill for a computer scientist is problem solving. Problem solving means the ability to formulate problems, think creatively about solutions, and express a solution clearly and accurately. As it turns out, the process of learning to program is an excellent opportunity to practice problem-solving skills. That's why this chapter is called, The way of the program. On one level, you will be learning to program, a useful skill by itself. On another level, you will use programming as a means to an end. As we go along, that end will become clearer.

The education system of India has been thoroughly compromised. It is being systematically used to create a historical grand narrative, which is ethically and factually incorrect. Sophisticated propaganda techniques are employed to create this artifice. This book is an effort to highlight this academic fraud. It is a result of research spread over more than 6 years. Facts are the guiding lights for the books and not any ideology. For further information refer to our website:

How do organizations structure themselves? A synthesis of the empirical

literature in the field, supported by numerous examples and illustrations, provides images that produce a theory. The author introduces five basic configurations of structure - the simple structure, the machine bureaucracy, the professional bureaucracy, the divisionalized form, and the adhocracy. This book reveals that structure seems to be at the root of many questions about organizations and why they function as they do.

Every day Americans make decisions about their privacy: what to share, how much to expose to whom. Securing the boundary between private affairs and public identity has become a central task of citizenship. Sarah Igo pursues this elusive social value across the twentieth century, as individuals asked how they should be known by their own society.

In addressing humanitarian crises, the international community has long understood the need to extend beyond providing immediate relief, and to engage with long-term recovery activities and the prevention of similar crises in the future. However, this continuum from short-term relief to rehabilitation and development has often proved difficult to achieve. This book aims to shed light on the continuum of humanitarian crisis management, particularly from the viewpoint of major bilateral donors and agencies. Focusing on cases of armed conflicts and disasters, the authors describe the evolution of approaches and lessons learnt in practice when moving from emergency relief to recovery and prevention of future crises.

Drawing on an extensive research project conducted by the Japan International Cooperation Agency Research Institute, this book compares how a range of international organizations, bilateral cooperation agencies, NGOs, and research institutes have approached the continuum in international humanitarian crisis management. The book draws on six humanitarian crises case studies, each resulting from armed conflict or natural disasters: Timor-Leste, South Sudan, the Syrian crisis, Hurricane Mitch in Honduras, the Indian Ocean earthquake and tsunami in Indonesia, and Typhoon Yolanda. The book concludes by proposing a common conceptual framework designed to appeal to different stakeholders involved in crisis management. Following on from the World Humanitarian Summit, where a new way of working on the humanitarian-development nexus was highlighted as one of five major priority trends, this book is a timely contribution to the debate which should interest researchers of humanitarian studies, conflict and peace studies, and disaster risk-management.

V. N. Volosinov's important work, first published in Russian in 1929, had to wait a generation for recognition. This first paperback edition of the English translation will be capital for literary theorists, philosophers, linguists, psychologists, and many others. Volosinov is out to undo the old disciplinary boundaries between linguistics, rhetoric, and poetics in order to construct a new kind of field: semiotics or textual theory. Ladislav Matejka and I. R. Titunik have provided a new preface to discuss Volosinov in relation to the great resurgence of interest in all the writing of the circle of Mikhail Bakhtin.
