The dramatic

forty-year  
obsession to  
find a  
solution to  
the thorniest  
scientific  
dilemma of  
the day--"the  
longitude  
problem."

Anyone alive  
in the  
eighteenth  
century would  
have known  
that "the  
longitude  
problem" was  
the thorniest  
scientific  
dilemma of  
the day-and  
had been for  
centuries.

Lacking the  
ability to  
measure their  
longitude,

sailors  
throughout  
the great  
ages of  
exploration  
had been  
literally  
lost at sea  
as soon as  
they lost  
sight of  
land.

Thousands of  
lives and the  
increasing  
fortunes of  
nations hung  
on a  
resolution.

One man, John  
Harrison, in  
complete  
opposition to  
the  
scientific  
community,  
dared to  
imagine a  
mechanical

clock that would keep precise time at sea, something no clock had ever been able to do on land.

Longitude is the dramatic human story of an epic scientific quest and of Harrison's forty-year obsession with building his perfect timekeeper, known today as the chronometer. Full of heroism and chicanery, it is also a fascinating brief history

of astronomy, navigation, and clockmaking, and opens a new window on our world.

Get up to speed with the deep learning concepts of Pytorch using a problem-solution approach.

Starting with an introduction to

PyTorch, you'll get familiarized with tensors, a type of data structure used to calculate arithmetic operations and also learn how they operate. You will then take a look at probability distributions using PyTorch and get acquainted with its concepts. Further you will dive into transformations and graph computations with PyTorch. Along the way you will take a look at common issues faced with neural network implementation and tensor differentiation, and get the best solutions for them. Moving on

to algorithms; you will learn how PyTorch works with supervised and unsupervised algorithms. You will see how convolutional neural networks, deep neural networks, and recurrent neural networks work using PyTorch. In conclusion you will get acquainted with natural language processing and text processing using PyTorch. The Biology Problem Solver Apress This is true story about real people is set in Edinburgh City and Dundee, where a petite Scottish Lassie called Rosie Gilmour, mother to Finlay Sinclair, receives news of the death of her	son - who tragically has taken his own life by hanging. Rosie pretends her son is still alive by talking to him, for that takes away the unbearable pain of her loss. But once she begins to face up to the fact that Finlay is not coming back, her conversations become more of a challenge than she can handle. When memories of her past are triggered by everyday life events, they take her mind back and forth in time - back to her own childhood days in 1960, when she flirted with the fairground boys, and to the day she gave birth to Finlay - "ME

She goes on to reveal doubts about her own self-worth and how she re-unites her role as mother - a role she had denied herself for seven years prior to Finlay's death. "I am very brave," Sheila Rae said, patting herself on the back. She wasn't afraid of anything—not thunder, not lightning, not the big black dog at the end of the block. How to take advantage of technology, data, and the collective wisdom in our communities to design powerful solutions to contemporary problems The challenges societies face today, from inequality to climate change to systemic racism, cannot be solved with yesterday's toolkit. Solving Public Problems shows how readers can take advantage of digital technology, data, and the collective wisdom of our communities to design and deliver powerful solutions to contemporary problems. Offering a radical rethinking of the role of the public servant and the skills of the public workforce, this book is about the vast gap between

---

failing public institutions and the huge number of public entrepreneurs doing extraordinary things--and how to close that gap. Drawing on lessons learned from decades of advising global leaders and from original interviews and surveys of thousands of public problem solvers, Beth Simone Noveck provides a practical guide for public servants, community leaders, students, and activists to become more effective, equitable, and inclusive leaders and repair our troubled, twenty-

first-century world. **How to Solve 50% of Your Problems ?** AuthorHouse Problems that beset Archimedes, Newton, Euler, Cauchy, Gauss, Monge, Steiner, and other great mathematical minds. An indispensable guide enabling business and management students to develop their professional competences in real organizational settings, this new and fully updated edition of **Problem Solving in Organizations** equips the reader with the necessary toolkit to apply the theory to practical business problems. By encouraging the reader to use the theory and showing them

---

how to do so in a fuzzy, ambiguous and politically charged, real-life organizational context, this book offers a concise introduction to design-oriented and theory-informed problem solving in organizations. In addition, it gives support for designing the overall approach to a problem-solving project as well as support for each of the steps of the problem-solving cycle: problem definition, problem

analysis, solution design, interventions, and evaluation. Problem Solving in Organizations is suitable for readers with a wide range of learning objectives, including undergraduates and graduates studying business and management, M.B.A students and professionals working in organizations.
