Bosch K-Jetronic
seems to be a bit of
a black art these
days. Almost
anyone you
mention it to backs

off and cringes.

Hopefully this series
of posts clears up
some of that
misinformation and
scaremongering,
and opens more
people up to
working with their
KJet instead of
binning it, or
neglecting it until it
inevitably fails.

		Part 2 focused on how to test the

system, now using the information from testing, we can move onto tuning and fixing any issues with the KJet system.. K Jetronic is a simple system really, but it needs every part of it running correctly to run well. My fuel flow test was low. If the flow test failed there are only a couple of things it could be.

Checking and repairing the Bosch KE-Jetronic fuel ...

Remove the air filter from the air flow sensor. The sensor plate must be flat. The chamfered edge of the sensor plate must face down. The word 'top' or five punch marks are stamped on the top of the sensor plate. The sensor plate must pass through the narrowest part of the funnel without touching the sides.
