The toxic heavy metal cadmium is used in rechargeable nickel cadmium (NiCd) batteries, and is spread to the environment through, among others, treatment of waste containing the batteries that have not been sorted out. Cordless power tools currently constitute the largest single input of portable nickel-cadmium (NiCd) batteries in many European countries. This report describes the supply situation for cordless power tools in the Nordic countries and discusses the key technical factors influencing substitution of NiMH for NiCd batteries in this sector. NiMH-driven power tools are sold in large quantities today, particularly on the professional market. Several large producers of cordless power tools recommend NiMH to pro-fessionals. The report presents new data which may inform the process of defining a sustainable regulation of NiCd batteries in the European Union. The project was financed by the PA-group under the Nordic Council of Ministers.

This book is a course in contrastive linguistics and translation which introduces the basics of linguistic analysis as applied to translation. Translation is presented as a problem-solving activity and linguistic analysis is proposed as a useful methodological tool to identify a wide range of translation problems. The course adopts a method which starts with the translation of words and goes up, step by step, through the different levels of linguistic structure to the level of pragmatic context. Myriad examples and a wide variety of exercises enable readers to acquire and practise some of the most common strategies translators use to solve the problems encountered at the different levels of linguistic analysis. The book aims at providing students with the theoretical and methodological tools needed to reinforce their linguistic and textual competence in the languages involved and make adequate progress along the translation process. As theoretical tools, students are given an overview of basic translation concepts and linguistic tools central to contrastive linguistics and textual analysis. As methodological tools, students are presented with a working method that, at the

beginning, will allow them to grasp the principles and strategies that govern general translation, and which they could later extrapolate to specialised translation.
