Why are there more English words ending in -ness than ending in -ity? What is it about some endings that makes them more widely usable than others? Can we measure the differences in the facility with which the various affixes are used? Does the difference in facility reflect a difference in the way we treat words containing these affixes in the brain? These are the questions examined in this book. Morphological productivity has, over the centuries, been a major factor in providing the huge vocabulary of English and remains one of the most contested areas in the study of word-formation and structure. This book takes an eclectic approach to the topic, applying the findings for morphology to syntax and phonology. Bringing together the results of twenty years' work in the field, it provides new insights and considers a wide range of linguistic and psycholinguistic evidence.

During the last few years, industrial fermentation technologies have advanced in order to improve the quality of the final product. Some examples of those modern technologies are the biotechnology developments of microbial materials, such as Saccharomyces and non-Saccharomyces yeasts or lactic bacteria from different genera. Other technologies are related to the use of additives and adjuvants, such as nutrients, enzymes, fining agents, or preservatives and their management, which directly

influence the quality and reduce the risks in final fermentation products. Other technologies are based on the management of thermal treatments, filtrations, pressure applications, ultrasounds, UV, and so on, which have also led to improvements in fermentation quality in recent years. The aim of the issue is to study new technologies able to improve the quality parameters of fermentation products, such as aroma, color, turbidity, acidity, or any other parameters related to improving sensory perception by the consumers. Food safety parameters are also included.

Transactions on Petri Nets and Other Models of Concurrency (ToPNoC) II These Transactions publish archival papers in the broad area of Petri nets and other models of concurrency, ranging from theoretical work to tool support and industrial applications. ToPNoC issues are published as LNCS volumes, and hence are widely distributed and indexed. This Journal has its own Editorial Board which selects papers based on a rigorous two-stage refereeing process. ToPNoC contains: - Revised versions of a selection of the best papers from workshops and tutorials at the annual Petri net conferences - Special sections/issues within particular subareas (similar to those published in the Advances in Petri Nets series) - Other papers invited for publication in ToPNoC - Papers submitted directly to ToPNoC by their authors The second volume of ToPNoC focuses on Concurrency in Process-Aware Information Systems. Although the topic of business process management using information technology has been addressed by consultants and software developers in depth, more fundamental approaches towards such Process-Aware Information Systems (PAISs) have been rather uncommon. It wasn't until the 1990s that researchers started to work on the foundations of PAISs. Clearly, concurrency theory is an essential ingredient in these foundations as business processes are

highly concurrent involving all types of routing logic and resource allocation mechanisms. The 16 papers in this special issue of ToPNoC cover topics ranging from the formal (mostly Petri-net based) foundations of PAISs to more applied topics such as flexibility and process mining. Thus, this volume gives a good overview of the state of the art in PAIS research.

Most of the papers in this volume were presented at the CATS international technical art history conference in June 2019 titled Mobility Creates Masters - Discovering Artists' Grounds 1550-1700, which explored the introduction of, and change to, the colored ground layers in European paintings form the Early Modern period. The title of the conference stemmed from the desire to instigate new research projects within the topic of the influence of artists' mobility on material choices and techniques related to the preparation of paintings. As well as contributions presented at the conference, this volume includes additional papers from recent research exploring the same topic. The volume begins with several studies on the documentation of grounds. The contributions are then arranged according to the country in which the painter was active, from southern Europe moving northwards. The lavishly illustrated contributions in this volume deal with the above questions and shed light on different methods of preparing painting supports, the purpose of preparatory layers, materials used in different countries and influence of shifts in fashion or availability of materials on ground layers. This fifth CATS Proceedings will be of interest to scholars and students, and museum professionals including curators, conservators, art historians and conservation scientists.

This is the second edition of a successful title first published in 1983 and now therefore a decade out of date. The authors consider the development of the right package for a particular food in a particular market, from the point of view of the food technologist, the packaging engineer and those concerned with marketing. While the original format has been retained, the contents have been thoroughly revised to take account of the considerable advances made in recent years in the techniques of food processing, packaging and distribution. While efficient packaging is even more a necessity for every kind of food, whether fresh or processed, and is an essential link between the food producer and the consumer, the emphasis on its several functions has changed. Its basic function is to identify the product and ensure that it travels safely through the distribution system to the consumer. Packaging designed and constructed solely for this purpose adds little or nothing to the value of the product, merely preserving farm or processor freshness or preventing physical damage, and cost effectiveness is the sole criterion for success. If, however, the packaging facilitates the use of the product, is reusable or has an after-use, some extra value can be added to justify the extra cost and promote sales. Many examples of packaging providing such extra value can be cited over the last decade.

Holistic mission, or integral mission, implies God is concerned with the whole person, the whole community: body, mind and spirit. Many Christians concentrate only on one aspect. This book reaffirms that to be true to the Bible, to follow the example of Jesus, the church must address the whole person in all their needs. It considers the meaning of the holistic gospel, how it has developed, and implications for the individual Christian, for the local church, for denominations and church groups, for missionary societies, for Christian NGOs, and for theological training institutions. It takes a global, eclectic approach, with 19 writers, church leaders, academics and practitioners, all of whom have much experience in, and commitment to, holistic mission. It addresses critically and honestly one of the most exciting, challenging, and important issues facing the church today. To be part of God's plan for God's people, the church must take holistic mission to the world.
