"Over 8,200 large city fires broke out between 1000 and 1939 CE in Central Europe. Prometheus Tamed inquires into the long-term history of that fire ecology, its local and regional frequencies, its relationship to climate history. It asks for the visual and narrative representation of that threat in every-day life. Institutional forms of fire insurance emerged in the form of private joint stock companies (the British model, starting in 1681) or in the form of cameralist fire insurances (the German model, starting in 1676). They contributed to shape and change society, transforming old communities of charitable solidarity into risk communities, finally supplemented by networks of cosmopolite aid.

After 1830, insurance agencies expanded tremendously quickly all over the globe: Cultural clashes of Western and native perceptions of fire risk and of what is insurance can be studied as part of a critical archaeology of world risk society and the plurality of modernities"--

The 2019 edition of the World Investment Report focuses on special economic zones (SEZs) which are widely used across most developing and many developed economies. Although the performance of many zones remains below expectations, the rate of establishment of new zones is accelerating as governments increasingly compete for internationally mobile industrial activity. Policymakers face not only the traditional challenges to making SEZs succeed, including the need for strategic focus, sound governance models, and effective investment promotion tools, but also new challenges brought about by the sustainable development imperative, the new industrial revolution, and changing patterns of international production. The Report explores the place of SEZs in today's global investment landscape and provides guidance for policymakers on how to make SEZs work for sustainable development. It presents international investment trends and prospects at global, regional and national levels, as well as the evolution of international production and global value chains. It analyses the latest developments in new policy measures for investment promotion, facilitation and regulation around the world, as well as updates on investment treaties, their reform and investment dispute settlement cases.

The Mogao Grottoes, a World Heritage Site in northwestern China, are located along the ancient caravan routes—collectively known as the Silk Road—that once linked China with the West. Founded by a Buddhist monk in the late fourth century, Mogao flourished over the following millennium, as monks, local rulers, and travelers commissioned hundreds of cave temples cut into a mile-long rock cliff and adorned them with vibrant murals. More than 490 decorated grottoes remain, containing thousands of sculptures and some 45,000 square meters of wall paintings, making Mogao one of the world's most significant sites of Buddhist art. In 1997 the Getty Conservation Institute, which had been working with the Dunhuang Academy since 1989, began a case study using the Late – Tang dynasty Cave 85 to develop a methodology that would stabilize the deteriorating wall paintings. This abundantly illustrated volume is the definitive report on the project, which was completed in 2010.

Diodoros of Sicily's book XIX is the main source for the history of the Diadochoi, Alexander the Great's Successors, from 317 to 311 BCE. With the first full-scale commentary on this text in any language Alexander Meeus offers a detailed and reliable guide to the complicated historical narrative and the fascinating ethnographic information transmitted by Diodoros, which includes the earliest accounts of Indian widow burning and Nabataean culture. Studying both history and historiography, this volume elucidates a crucial stage in the creation of the Hellenistic world in Greece and the Near East as well as the confusing source tradition. Diodoros, a long neglected author indispensable for much of our knowledge of Antiquity, is currently enjoying growing scholarly interest. An ample introduction discusses his historical methods and sheds light on his language and style and on the manuscript transmission of books XVII-XX. By negotiating between diametrically opposed scholarly opinions a new understanding of Diodoros' place in the ancient historiographical tradition is offered. The volume is of interest to scholars of ancient historiography, Hellenistic history, Hellenistic prose and the textual transmission of the Bibliotheca.

The light-duty vehicle fleet is expected to undergo substantial technological changes over the next several decades. New powertrain designs, alternative fuels, advanced materials and significant changes to the vehicle body are being driven by increasingly stringent fuel economy and greenhouse gas emission standards. By the end of the next decade, cars and light-duty trucks will be more fuel efficient, weigh less, emit less air pollutants, have more safety features, and will be more expensive to purchase relative to current vehicles. Though the gasoline-powered spark ignition engine will continue to be the dominant powertrain configuration even through 2030, such vehicles will be equipped with advanced technologies, materials, electronics and controls, and aerodynamics. And by 2030, the deployment of alternative methods to propel and fuel vehicles and alternative modes of transportation, including autonomous vehicles, will be well underway. What are these new technologies - how will they work, and will some technologies be more effective than others? Written to inform The United States Department of Transportation's National Highway Traffic Safety Administration (NHTSA) and Environmental Protection Agency (EPA) Corporate Average Fuel Economy (CAFE) and greenhouse gas (GHG) emission standards, this new report from the National Research Council is a technical evaluation of costs, benefits, and implementation issues of fuel reduction technologies for next-generation light-duty vehicles. Cost, Effectiveness, and Deployment of Fuel Economy Technologies for Light-Duty Vehicles estimates the cost, potential efficiency improvements, and barriers to commercial deployment of technologies that might be employed from 2020 to 2030. This report describes these promising technologies and makes recommendations for their inclusion on the list of technologies applicable for the 2017-2025 CAFE standards.
