"A true master class in the art of making the impossible possible." —Paul Polman One of the most vexing human rights issues of our time has been how to protect the rights of individuals and communities worldwide in an age of globalization and multinational business. Indeed, from Indonesian sweatshops to oil-based violence in Nigeria, the challenges of regulating harmful corporate practices in some of the world's most difficult regions long seemed insurmountable. Human rights groups and businesses were locked in a stalemate, unable to find common ground. In 2005, the United Nations appointed John Gerard Ruggie to the modest task of clarifying the main issues. Six years later, he had accomplished much more than that. Ruggie had developed his now-famous "Guiding Principles on Business and Human Rights," which provided a road map for ensuring responsible global corporate practices. The principles were unanimously endorsed by the UN and embraced and implemented by other international bodies, businesses, governments, workers' organizations, and human rights groups, keying a revolution in corporate social responsibility. Just Business tells the powerful story of how these landmark "Ruggie Rules" came to exist. Ruggie demonstrates how, to solve a seemingly unsolvable problem, he had to abandon many widespread and long-held understandings about the relationships between businesses, governments, rights, and law, and develop fresh ways of viewing the issues. He also takes us through the journey of assembling the right type of team, of witnessing the severity of the problem firsthand, and of pressing through the many obstacles such a daunting endeavor faced. Just Business is an illuminating inside look at one of the most important human rights developments of recent times. It is also an invaluable book for anyone wanting to learn how to navigate the tricky processes of global problem-solving and consensus-building and how to tackle big issues with ambition, pragmatism, perseverance, and creativity.

[Journal of the Audio Engineering Society](#) DIANE Publishing The prospect of writing a book on loudspeakers is a daunting one, since only a multivolume encyclopedia could truly do justice to the subject. Authors writing about this subject have generally concentrated on their own areas of expertise, often covering their own specific topics in great detail. This book is no exception; the author's background is largely in professional loudspeaker application and specification, and the emphasis in this book is on basic component design, operation, measurement, and system concepts. The book falls largely into two sections; the first (Chapters 1-9) emphasizing the building blocks of the art and the second (Chapters 10-16) emphasizing applications, measurements, and modeling. While a thorough understanding of the book requires a basic knowledge of complex algebra, much of it is understandable through referring to the graphics. Every attempt has been made to keep graphics clear and intuitive. Chapter 1 deals with the basic electro-mechano-acoustical chain between input to the loudspeaker and its useful output, with emphasis on the governing equations and equivalent circuits. Chapter 2 is a survey of cone and dome drivers, the

stock-in-trade of the industry. They are discussed in terms of type, design, performance, and performance limits. Chapter 3 deals with magnetics. Once a source of difficulty in loudspeaker design, magnetics today yields easily to modeling techniques. Chapter 4 discusses low-frequency (LF) system performance, primarily from the viewpoint of Thiele-Small parameters. We also discuss some of the multi chamber LF systems that became popular during the eighties.

This volume contains papers presented at the 11th International Conference on Jet Cutting Technology, held at St. Andrews, Scotland, on 8-10 September 1992. Jetting techniques have been successfully applied for many years in the field of cleaning and descaling. Today, however, jet cutting is used in operations as diverse as removing cancerous growths from the human body, decommissioning sunsea installations and disabling explosive munitions. The diversity is reflected in the papers presented at the conference. The papers were divided into several main sections: jetting basics -- materials; jetting basics -- fluid mechanics; mining and quarrying; civil engineering; new developments; petrochem; cleaning and surface treatment; and manufacturing. The high quality of papers presented at the conference has further reinforced its position as the premier event in the field. The volume will be of interest to researchers, developers and manufacturers of systems, equipment users and contractors.
