This first book on load-pull systems is intended for readers with a broad knowledge of high frequency transistor device characterization, nonlinear and linear microwave measurements, RF power amplifiers and transmitters. Load-Pull Techniques with Applications to Power Amplifier Design fulfills the demands of users, designers, and researchers both from industry and academia who have felt the need of a book on this topic. It presents a comprehensive reference spanning different load-pull measurement systems, waveform measurement and engineering systems, and associated calibration procedures for accurate large signal characterization. Besides, this book also provides in-depth practical considerations required in the realization and usage of load-pull and waveform engineering systems. In addition, it also provides procedure to design application specific load-pull setup and includes several case studies where the user can customize architecture of load-pull setups to meet any specific measurement requirements. Furthermore, the materials covered in this book can be part of a full semester graduate course on microwave device characterization and power amplifier design.

Volume I this report presents a summary of the engineering aspects of the High Altitude Nuclear Detection Studies (HANDS) project. The system was oriented around a computer that performed control functions and recorded and processed data from a number of geophysical sensors. Brief descriptions of the facility and various censor equipment are presented. The system operation is described, and some recommendations are given.

The ISES Solar World Congress, held in Denver, Colorado in August 1991 attracted over 1000 participants from nearly 70 countries, making it the largest solar energy event of its kind in the world. As a lasting record of that congress, 630 papers are published here in 4 volumes of proceedings. Volume 1 is dedicated to solar energy, biofuels and renewable resources. Volume 2 contains papers on active solar and solar heat. Passive solar, socio-economic and educational aspects are considered in Volume 3, and finally the plenary sessions, and the Farrington Daniels lecture are published in Volume 4. 1991 Solar World Congress presents the very latest advances in the utilization of alternative energy resources and technology.

The Twenty-Second Symposium on Naval Hydrodynamics was held in Washington, D.C., from August 9-14, 1998. It coincided with the 100th anniversary of the David Taylor Model Basin. This international symposium was organized jointly by the Office of Naval Research (Mechanics and Energy Conversion S&T Division), the National Research Council (Naval Studies Board), and the Naval Surface Warfare Center, Carderock Division (David Taylor Model Basin). This biennial symposium promotes the technical exchange of naval research developments of common interest to all the countries of the world. The forum encourages both formal and informal discussion of the presented papers, and the occasion provides an opportunity for direct communication between international peers.
