Elsevier Health Sciences  
Neuro-ophthalmology is a field of medicine that touches on every subspecialty in neurology, but has an undeserved reputation as a branch of knowledge that is difficult to learn and practice. Many neurologists and ophthalmologists do not receive sufficient exposure to neuro-ophthalmology during their residencies, and are uncomfortable diagnosing and treating patients with neuro-ophthalmic problems. Authored by neuro-ophthalmologists whose careers span three

generations in the field, Neuro-Ophthalmology helps clinicians evaluate and manage patients with neuro-ophthalmic problems. This "curb-side consult" approach is divided into five sections: afferent (visual) disorders; efferent (eye movement) disorders; eyelid disorders; pupil disorders; and combination syndromes. Based on the most current scholarly evidence and filled with practical advice, Neuro-Ophthalmology provides the answers to "what do I do now?"

Principles and Practice of Movement Disorders E-Book Bradley and Daroff's Neurology in Clinical Practice

In 2012, the American

Board of Medical Specialties (ABMS) approved Interventional Radiology (IR) as its own specialty. Born out of the field of Diagnostic Radiology, IR requires a more clinical focus on initial consultation and post-procedural management, rather than its previous role of performing image-guided procedures. Interventional Radiology: Fundamentals of Clinical Practice is written with this new focus in mind to help readers incorporate their procedural knowledge into a holistic approach of patient management. Chapters explore topics across a broad spectrum of IR, with a focus on etiology and pathophysiology of disease, followed by discussions on intra-procedural and post-procedural management. Numerous tables and boxes, and over 420 total figures complement chapter

content. This comprehensive text is a must-have text for IR residents and reference for all practicing interventional radiologists.

"The cerebrospinal vasculature originates at the aortic arch. The right brachiocephalic artery divides into the right common carotid artery and the right subclavian artery. The left common carotid and left subclavian arteries arise directly from the aortic arch. The 2 common carotid arteries bifurcate into the internal and external carotid arteries. The anterior circulation of the brain includes the

distal branches from the internal carotid artery, including the anterior cerebral artery and the middle cerebral artery. The vertebral arteries arise from the subclavians and join at the pontomedullary junction, forming the basilar artery. The vertebrobasilar system and distal branches are commonly known as the posterior circulation of the brain"--

neurohospitalist line is important to the financial success of hospitals and the physicians employed there. Many neurology patients also have internal medicine problems, and often it is a general hospitalist without neurology training who treat these patients. These physicians sorely need more information on neurology. Conversely, neurologists caring for these patients have only had one year of internal medicine training and require more guidance on medical problems. Given these realities, there is a need for a resource on hospital neurology. With *The Hospital Neurology Book*, Drs. Salardini and Biller have created a practical, concise, and useful work that guides both neurologists and internists in the areas in which their training is currently not sufficient for hospital practice. *The Hospital Neurology Book* features a highly readable format, providing information physicians can act upon,

including recipes and protocols for patient care and question-based chapter headings that lead physicians to the exact issue they are dealing with in the moment. Each chapter (or chapter section as appropriate) opens with a case study, setting the stage in a highly practical manner, and ends with high yield summary points useful for consolidating learning.

Stroke is a leading cause of death and disability throughout the world.

About one in three symptomatic strokes are due to disease of small perforating arteries; however, most effective interventions are targeted at disease of large arteries. The underlying mechanisms and treatment of small vessel disease remain poorly

---

understood. Microbleeds have emerged as a critical imaging marker of small vessel disease, being found in all types of stroke. With increasing evidence that microbleeds are caused by hypertensive arteriopathy and cerebral amyloid angiopathy, they are likely to play a strong future role in increasing our understanding of the causes of small vessel disease and the potential link between cerebrovascular disease and neurodegeneration. *Cerebral Microbleeds* summarizes our current knowledge, bringing together expert research from global authorities in the field. This authoritative and systematic text will be of interest to all clinical researchers and

physicians in the fields of stroke and cognitive impairment.

*Clinical Neuroanatomy* McGraw Hill Professional Connections define the functions of neurons: information flows along connections, as well as growth factors and viruses, and even neuronal death may progress through connections. Knowledge of how the various parts of the brain are interconnected to form functional systems is a prerequisite for the proper understanding of data from all fields in the neurosciences. *Clinical Neuroanatomy: Brain Circuitry and Its Disorders* bridges the gap between neuroanatomy and clinical neurology. It emphasizes human and primate data in the context of disorders of brain circuitry which are so common in neurological practice. In addition,

---

numerous clinical cases demonstrate how normal brain circuitry may be interrupted and to what effect. Following an introduction into the organization and vascularisation of the human brain and the techniques to study brain circuitry, the main neurofunctional systems are discussed, including the somatosensory, auditory, visual, motor, autonomic and limbic systems, the cerebral cortex and complex cerebral functions.
