A heartbreaking and powerful story about a black boy killed by a police officer, drawing connections through history, from award-winning author Jewell Parker Rhodes. Only the living can make the world better. Live and make it better. Twelve-year-old Jerome is shot by a police officer who mistakes his toy gun for a real threat. As a

ghost, he observes the devastation that's been unleashed on his family and community in the wake of what they see as an unjust and brutal killing. Soon Jerome meets another ghost: Emmett Till, a boy from a very different time but similar circumstances. Emmett helps Jerome process what has happened, on a journey towards recognizing how historical racism may have led to the events that ended his life. Jerome also meets Sarah, the daughter of the police officer, who

grapples with her father's actions. Once again Jewell Parker Rhodes deftly weaves historical and socio-political layers into a gripping and poignant story about how children and families face the complexities of today's world, and how one boy grows to understand American blackness in the aftermath of his own death. Pretty in Ink Simon Spotlight Many advances have been made in the last decade in the understanding of the computational principles underlying olfactory system functioning. Neuromorphic Olfaction is a collaboration among European researchers

who, through NEUROCHEM (Fp7-Grant Agreement Number 216916)--a challenging and innovative European-funded project--introduce novel computing paradigms and biomimetic artifacts for chemical sensing. The implications of these findings are relevant to a wide audience, including researchers in artificial olfaction, neuroscientists, physiologists, and scientists working with chemical sensors. Developing neuromorphic olfaction from conceptual points of view to practical applications, this cross-disciplinary book examines: The biological components of

---

vertebrate and invertebrate chemical sensing systems. The early coding pathways in the biological olfactory system, showing how nonspecific receptor populations may have significant advantages in encoding odor intensity as well as odor identity. The redundancy and the massive convergence of the olfactory receptor neurons to the olfactory bulb. A neuromorphic approach to artificial olfaction in robots. Reactive and cognitive search strategies for olfactory robots. The implementation of a computational model of the mammalian olfactory system. The book's primary focus is on

translating aspects of olfaction into computationally practical algorithms. These algorithms can help us understand the underlying behavior of the chemical senses in biological systems. They can also be translated into practical applications, such as robotic navigation and systems for uniquely detecting chemical species in a complex background.

Readers will learn \* The principles that underlie an effective sustained silent reading program \* A five-step process for using sustained silent reading to enhance

background knowledge \* The defining characteristics of effective vocabulary instruction \* A six-step process for direct instruction in vocabulary in each discipline \* The vocabulary terms critical to students' success in every academic subject Vignettes suggest how the recommended reading and vocabulary instruction programs might be implemented in elementary schools, middle and junior high schools, and high schools. The book also includes a list of 7,923 vocabulary terms culled from
