This excursion into American cultural history looks at the toothpaste and toothbrush industries from 1900 to 2008. During these years, America moved from cleaning their teeth mostly with homemade powders to

using an enormous array of brands, often applied with an electric toothbrush. From early 20th century products like Forhan's (which "cured" pyorrhea) to the whiteners of the 1920s (which unfortunately also removed tooth enamel), and from paste that eliminated "that clinging film" and to copywriters who "wondered where the yellow went," the history of toothpaste has long been a testament to the power of misleading advertising. Interrupting a steady flow of hyperbole was the one true wonder ingredient—fluoride, which enabled Crest to be for decades America's top-selling brand. America Brushes Up JP Medical Ltd

In May 1998, a 4-day workshop was held to consider the role of mechanical plaque control, whether supplemented with chemical agents or not, in the prevention and treatment of dental caries and periodontitis. The proceedings of this workshop should serve as a follow-up to those of the NIDR's landmark 1985 workshop, until now widely regarded as the definitive source for state-of-the-science information on this important issue. The 1998 proceedings combines the reports of all four sessions, including all

position papers, consensus reports, and policy statements. An excellent resource for clinicians and dental hygienists alike. [editor].
